Turnarounds, outages, start-ups

Country	Plant	Location	Capacity '000 mt/y	Anticipated closure/restart
Ukraine	OPZ	Yuzhnyy	561	OPZ halted operations September 2024 having restarted one of two 561,000 mt/y ammonia lines after a 3-year hiatus.
Belgium	Yara	Tertre	433	Yara announced in October 2024 it planned to close the ammonia unit at its Tertre plant.
Germany	BASF	Ludwigshafen	396	BASF previously announced plans to close the smaller of its two lines at Ludwigshafen.
United Kingdom	CF Fertilisers	Billingham	495	CF announced July 2023 plans to permanently close its ammonia plant at Billingham, where it temporarily suspended ammonia production in August 2022.
United Kingdom	CF Fertilisers	Ince	330	CF announced June 2022 it would permanently close its plant at Ince, which had been idled since mid-September 2021.
United Kingdom	Yara	Hull	300	Yara announced in February 2025 it had shut down ammonia production at its Hull plant.
Trinidad and Tobago	Nutrien	Point Lisas	2200	Nutrien announced Oct. 21 2025 a "controlled shut down" due to port access and natural gas supply concerns.
Qatar	Qatar Energy	Mesaieed	3830	Qatar Energy declared force majeure on all production including ammonia after Iranian missile strikes March 4.
Qatar	Qatar Energy	Mesaieed	600	Qatar Energy's Qafco-7 plant was due to start production April 2026 prior to the outbreak of the Middle East war.
Saudi Arabia	Maaden	Ras Al Khair	1089	Ammonia production has been halted at the Maaden Wa'ad Al Shamal Phosphate Company plant due to the war in the Middle East.
Saudi Arabia	Maaden	Ras Al Khair	1100	Ammonia production has been halted at the Maaden III ammonia plant due to the war in the Middle East.
France	LAT Nitrogen	Grand-Puits	416	LAT Nitrogen announced March 26 it would cease fertilizer production at its Grandpuits site to "preserve competitiveness" at its Grand-Quevilly and Ottmarsheim plants.
Egypt	EBIC	Ain Sokhna	671	Scheduled turnaround for six weeks from mid-August
USA	Woodside	Beaumont	1100	Production offline after a safety event Aug. 8.

Market Commentary

Gas surge splits views on European ammonia market as offers diverge

- European gas costs push ammonia production costs close to $1,000/mt
- US seaborne supply remains long despite Woodside's downtime: buyer
- Asian markets stabilize amid plant outages, limited Chinese activity

The global ammonia market was marked by lower offers into Europe amid the natural gas run, which pushed up domestic production costs, limited spot activity in China and flattened pricing in India in the week to Sept. 10.

The estimated cost of domestic ammonia production soared in the week to Sept. 10, as gas prices continued their steady march upwards. The Dutch TTF front-month contract closed Sept. 9 at Eur79.39/MWh, up almost Eur6/MWh on the previous week. The latest closing price, equivalent to more than $27/MMBtu, suggested a total cost of gas per metric ton of ammonia of almost $920, and a total estimated cost of production, including carbon costs, of around $995/mt.

Sources were split over the gas surge implications for the European import market, with some seeing it as allowing for significant CFR price development, while others said the correlation did not mean causation.

Indications were heard over a more than $100/mt range from sellers, who reported offers from the low $600s/mt CFR duty paid/duty free to $720-$730/mt CFR duty paid/duty free.

Likewise, buyers saw differing views, with offers reported to be available from $600-$630/mt CFR duty paid/duty free, to $710/mt CFR duty paid/duty free.

The Northwest Europe price ended the week at $645/mt CFR duty paid/duty free on reports of lower offers and weak demand, despite gas prices suggesting European producers were facing production costs of around $1,000/mt.

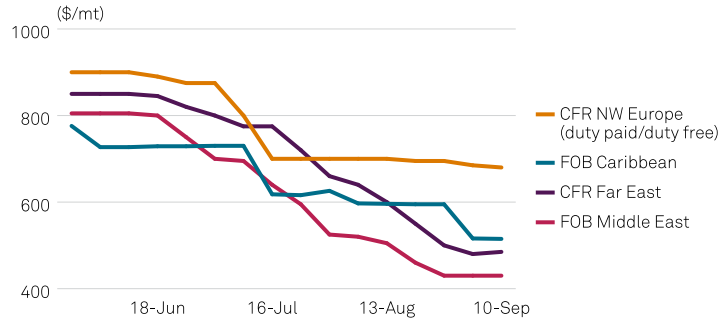

Elsewhere in the West, markets were comparatively flat. No fresh activity was heard in Turkey, with last-done Russian business at $505/mt CFR still considered best reference by buyers.

In the US, the disconnect between a tight inland market and a somewhat long seaborne supply remained a major theme of conversations. Buyers said they remain largely absent from the spot market, pointing to ample supply, even in the absence of Woodside's Beaumont New Ammonia production. A trader said $505/mt FOB US Gulf is reflective of current pricing.

A supply-side source mentioned an Indonesian cargo heard traded to Mexico as a sign that the tide might turn in the face of a bullish run in coal, with ample consequences expected for Nitrogen exports from China, and the increase in European gas prices. The same source said it expects a Tampa contract for October to be higher than the current $555/mt CFR.

In North Africa, Abu Qir was heard offering 10,000 mt for September loading, while Algerian producers were reported targeting $610-620/mt FOB for new business. No fresh activity was heard for Morocco.

Platts ammonia key prices

Source: S&P Global Energy

East of the Suez Canal, the Indian market was flat. There was talk of lower value trade, but indications continued to be heard higher, at above $450/mt CFR for the West Coast. On the East Coast, demand was reported to have generally dried up, although bids were still being heard below $430/mt CFR.

The Middle East was quiet and sources in the region said the overall situation remained unchanged.

China's domestic ammonia market remained largely stable in the week to Sept. 10. "The overall domestic supply remains somewhat tight, while demand for fertilizers has eased slightly. Procurement is primarily driven by essential needs, with weak downstream users to pick up higher prices," a local producer said. On the export front, activity remained limited, with no spot transactions heard during the week.

The Far East ammonia market was assessed as stable to slightly firmer Sept. 10. Several traders noted sentiment had improved amid firmer Southeast Asian pricing and limited Chinese export activity. Deliveries into the Far East were indicated at $450-$485/mt CFR.

In Southeast Asia, market participants said an outage at an Indonesian plant was expected to support regional prices by reducing spot availability.

"I heard the maintenance will continue until early October," a buyer said.

Despite subdued demand, several sources said the market appeared to have stabilized. Deliveries into Southeast Asia were heard at $400-$410/mt FOB.

— Shu qi Ng, Mollie Gorman, Thales Schmidt

Europe, Mediterranean and Africa

European ammonia market divided as high gas costs clash with weak demand

- Sellers quote $600-$730/mt amid uncertainty
- Gas costs surge to near $1,000/mt for production
- Yara launches 800,000 mt/year CO2 capture

Northwest Europe

Opinions on the value and direction of the European market were divided in the week to Sept. 10, mainly on fault lines

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

over the influence of domestic production costs and current import demand.

Pricing indications from sellers were heard from "very close" to $600/mt CFR duty paid/duty free, to $720-$730/mt CFR duty paid/duty free; and from buyers from $600-$630/mt CFR duty paid/duty free to $680-$700/mt CFR duty paid/duty free.

Two sellers said lower CFR values would be required to spark any demand. One said the market was currently "in the eye of the storm" as most buyers' requirements were covered and therefore they were "not in panic mode."

"Buyers are testing waters, but not jumping in," they said.

"Prices are still too high for buyers to come back in the market," a second seller said. They predicted prices would decline into October then rebound from the second half of the month, provided there was a big enough dip in the first place.

"There is plenty of availability and you can find ammonia from wherever you want," a buyer said.

But a second buyer said they expected European prices to pick up due to the high cost of natural gas.

"It seems to me that with Eur79/MWh gas prices, the ammonia price can be far above the current level, to still make it attractive," the buyer said.

A third seller was bullish and said their offer level would be $720-$730/mt CFR duty paid/duty free, with the market only likely to increase due to gas prices.

European fertilizer producers were feeling the strain of high production costs.

One producer said they were "checking the cost of production" and were "going to review its price list next week. No offers for now."

A second producer said it plans to suspend sales because of ongoing gas market volatility.

The estimated cost of domestic ammonia production soared in the week to Sept. 10, as natural gas prices continued their steady march. The Dutch TTF front-month contract closed Sept. 9 at €79.39/MWh, up almost €6/MWh on the previous week. The latest closing price, equivalent to more than $27/MMBtu, suggested a total cost of gas per metric ton of ammonia of almost $920, and a total estimated cost of production, including carbon costs, of around $995/mt.

The estimated cost of the Carbon Border Adjustment Mechanism (CBAM) to a European ammonia importer for a cargo with a cargo intensity of 2.2 mt CO2e was calculated at $69.67/mt on Sept 4, up from $69.19/mt on Aug. 28. It suggests a total import cost for a cargo with a carbon intensity of 2.2 mt CO2e of $714.67/mt CFR duty paid/duty free plus calculated CBAM cost using the Sept. 10 NW Europe CFR duty free assessment.

Yara International started carbon capture operations at its Sluiskil ammonia site in the Netherlands, it said in a statement Sept. 7, marking the start of the largest such plant in Europe.

The facility is designed to capture and liquefy up to 800,000 metric tons/year of CO2 from ammonia production at the site, shielding those volumes from European carbon taxation under the EU Emissions Trading System.

Yara said the site would enable the company to "further reduce the carbon footprint of its production and support low-carbon value chains across agriculture, industry, energy and shipping."

The 23,300 mt Oceanic Star, loaded in Brazil, called at Teesport for CF Fertilisers Sept. 5-8.

Koch's 25,000 mt Green Energy, loaded in Trinidad and Tobago, is expected at Antwerp Sept. 15.

For Yara:

- The 25,000 mt Kallo, loaded in Trinidad, delivered to Uusikaupunki Sept. 3-7
- The 23,000 mt Green Pioneer, loaded at Texas City, delivered to Porsgrunn Sept. 7

- The 14,000 mt Yara Kara, loaded in Trinidad, is due at Uusikaupunki Sept. 19
- The 14,000 mt Yara Nauma arrived at Brunsbuettal Sept. 7 to load for Yara
- The 15,000 mt Navigator Yauza, loaded in Trinidad, arrived at Rostock Sept. 9
- The 25,000 mt Libramont, loaded in Algeria, delivered to Uusikaupunki Sept. 7-8

Algeria

Selling indications were heard at $610-$620/mt FOB Algeria for September loading.

The 6,000 mt Gas Aegean loaded from Fertial at Annaba Sept. 4-5 for Fertiberia.

Yara's 15,000 mt Navigator Galaxy loaded at Arzew Sept. 7, after a stint in dry dock, and was followed Sept. 8 by the 15,000 mt Yara Sela.

Egypt

Abu Qir was heard to have 10,000 mt spot ammonia available for September loading.

The 15,000 mt Trammo Marycam loaded at Abu Qir Sept. 6 for delivery to Turkey.

— Mollie Gorman

Turkish ammonia market stalls as buyers await winter demand

- Russia spot trade sets Turkey CFR price
- Portugal gets cargo via ship-to-ship transfer

Turkey

The Turkish market was heard unchanged in the week to Sept. 10 following a spot trade the previous week for Russian ammonia.

Buyers said the trade, heard around $500/metric ton CFR, remained the best reference for the import market.

Buyers noted they had received no fresh offers and did not expect better downstream fertilizer demand until closer to winter.

Bulgaria

The 23,000-mt Sali, loaded by Fertiglobe in Libya, delivered to Agropolychim at Varna on Sept. 7.

Morocco

The 40,000-mt Clipper Venus arrived at Jorf Lasfar on Sept. 10 to deliver to OCP after loading from CF Industries and Gulf Coast Ammonia in the US and Point Lisas in Trinidad.

Portugal

Fertiglobe's 15,000-mt Gas Widuri delivered to Lisbon on Sept. 6. The ship was loaded via a ship-to-ship transfer from the 25,000-mt Severin Schulte on Sept. 2-4 off the Spanish coast due to logistical constraints at the port.

Russia

The 14,400-mt Bertolle arrived back at Ust Luga on Aug. 31 to load for EuroChem.

The 26,000-mt Eco Sorcerer arrived at Ust Luga on Sept. 10 to load for EuroChem.

— Mollie Gorman

CFR NW Europe Ammonia Assessment Rationale

Platts assessed Northwest Europe ammonia at $645-$680/metric ton CFR duty paid/duty free on Sept. 10.

The range reflected reports of lower offers against a backdrop of limited import demand.

Platts is part of S&P Global Energy.

Middle East

Middle East ammonia market prices remain flat

- Middle East ammonia prices hold at $425-$430/mt
- SABIC approves 1.2 mil mt/year ammonia plant expansion

The Middle East ammonia market was flat on the week ended Sept. 10.

A producer said the situation remained "status quo" with no change in operations from plants downed due to logistical constraints from the US-Israel war with Iran.

A second producer said they did not expect any improvement in Middle East ammonia exports before the end of the year.

Platts assessed Middle East ammonia at $425-$430/metric ton FOB Sept. 10.

Jordan

Trammo's 26,000 mt Eco Enchanted, loaded in China, arrived at Aqaba Sept. 8 after sailing via the Red Sea.

Saudi Arabia

Maaden's export ammonia plants are curtailed and will remain so due to the inability to export from the Persian Gulf, according to its second-quarter earnings report.

The company said it has been running ammonia production just for captive use in Q2.

Most of Maaden's fleet remains outside the high-risk area, off the West Coast of India, waiting for hostilities to ease.

The 25,000 mt Seashine, previously used by Sabic, also appeared to be waiting just outside the high-risk area.

Sabic's ammonia production rate remained unclear.

Sabic Agri-Nutrients, a subsidiary of state petrochemical producer Saudi Basic Industries Corp., has finalized the investment decision for an integrated ammonia and urea industrial complex in Jubail, Saudi Arabia, the company reported to the Saudi stock exchange, Tadawul, Sept. 10.

The complex will include a 1.2 million metric tons/year ammonia plant, as well as two urea plants capable of producing a combined 2.6 million mt/year, the company said. The complex will also feature a post-combustion carbon capture unit, according to the report.

The project will boost Sabic's urea production capacity by 54%, from a current 4.8 million mt/year to 7.4 million mt/year, the subsidiary said.

Platts is part of S&P Global Energy.

South Asia

India ammonia market subdued as buyers test bids below offers

- Buyers test bids below $400/mt CFR levels
- Southeast Asian cargoes gain duty advantage
- Offer-bid gap persists at $30-$40/mt spread

India

The Indian ammonia market remained subdued, with traders describing the East Coast as largely inactive and overall buying interest limited.

Several traders said import ideas remained below $400/metric ton CFR, although interest in Southeast Asian cargoes had improved due to their duty-free status compared to Chinese origin. However, these bid levels were considered unworkable given the limited Southeast Asian spot availability.

Indian buyers were heard testing bids below $400/mt CFR for Chinese-origin cargoes, although such levels were widely considered unworkable.

Buyers on the East Coast were seeking cargoes for mid-October arrival amid expectations of further price declines, a trader said.

A buyer inquiry was heard on India's West Coast, although activity remained slow amid the ongoing monsoon season, according to a second trader.

A third trader said buying interest had emerged from two companies seeking cargoes, with indications heard at $430-$450/mt CFR East Coast India, although volume requirements remained unclear.

For end-September to early October delivery, buying ideas were heard at around $420/mt CFR East Coast India and $435/mt CFR for Southeast Asian-origin cargoes, while offer levels were indicated at $450-$460/mt CFR East Coast India and $465-$470/mt CFR West Coast India, according to a fourth trader.

A fifth trader said indicative offers at $430-$440/mt CFR East Coast India for early October delivery from MGC and Southeast Asian origins would be workable.

"However, I believe seller interest would be limited as current price levels are not attractive for sellers," according to the trader.

The 26,000 mt Gas Ammon, loaded by OQ Trading at Salalah, delivered to Pipavav for Itochu Sept. 9 and was expected to be delivered to JNPT for Deepak next.

The 23,000 mt Gas Quantum loaded at Bontang and delivered to Paradip Aug. 31 - Sept. 2.

East Asia and Southeast Asia

Asian ammonia steadies as Southeast Asia firms amid muted spot demand

- Rising FOB SEA underpins regional prices
- China focuses on contracts, halts spot exports
- Far East spot demand muted amid term contract coverage

The Asian ammonia market remained stable to slightly firmer in the week ending Sept. 10, underpinned by slightly stronger Southeast Asian sentiment amid subdued regional demand.

China

China's domestic ammonia market remained largely stable on Sept. 10, with indications heard at Yuan 2,550-2,680/mt EXW Jiangsu, Yuan 2,580-2,770/mt EXW Shandong, Yuan 3,000/mt EXW Fujian and Yuan 2,550-2,750/mt EXW Anhui. "The overall domestic supply remains somewhat tight, while demand for fertilizers has eased slightly. Procurement is primarily driven by essential needs, with weak downstream users to pick up higher prices," according to a local producer.

On the export front, traders continued to report limited activity, with no spot transactions heard during the week. "Chinese suppliers were understood to be focusing on previously concluded business and long-term contract commitments, particularly for smaller vessels," according to a trader. Indicative offers were heard at $450/mt FOB China.

The Far East ammonia market was assessed as stable to firmer Sept. 10. "The spot market activity remained limited as Far East buyers were largely covered by term contracts, leaving little spot demand in the market," according to a trader. Several traders noted sentiment had strengthened slightly alongside firmer Southeast Asian pricing, as market dynamics shifted amid the absence of Chinese export activity. Deliveries into the Far East were indicated at $450-$485/mt CFR.

The 40,000 mt Polar loaded at Nanjing Aug. 24-28 and Zhanjiang Sept. 4-5.

The 3,650 mt Sheng Hang Yong Le loaded at Qinzhou Sept. 5-6, destined for Caojing.

Trammo's 14,600 mt Hong Jin loaded at Nanjing Sept. 4 and delivered to Caojing Sept. 7-8.

The 4,100 mt An Tai Yuan loaded at Zhoushan Sept. 7-8 and delivered to Yeosu Sept. 10.

Taiwan

"Our plant is currently operating at 70%-80% utilization rates, with inventory levels remaining healthy and term contract coverage extending through November. Based on current market conditions, our buying idea would be around $430-$440/mt CFR," according to a buyer.

The buyer added that uncertainty remained over October-November demand as inventories in the Far East would gradually decline. 'I think prices are unlikely to fall much further,' according to the buyer."

Another buyer indicated that spot market pricing was not currently relevant to its operations. "We have no idea on the spot buying idea as our plant remains down," according to the buyer.

Yang Ming Marine Transport Corp. has signed a shipbuilding contract with South Korea's Hanwha Ocean for six LNG dual-fuel container ships, advancing its energy-efficient fleet program, the Taiwan-headquartered global shipping company said in a statement on Sept. 2.

South Korea

Several traders said that spot demand from South Korea remained absent, with most buyers covered under term contracts.

"I heard one inquiry for a spot cargo of around 20,000 mt from South Korea, but it appeared to be more of a market test than a genuine buying requirement, as the buyer was seeking offers without specifying volume, shipment timing or other details," according to a trader.

The 25,000 mt Green One loaded at Bontang Aug. 11-13, delivered to Incheon Aug. 26-27 and Yeosu Sept. 1-4.

The 40,000 mt Pazifik loaded at Luwuk Aug. 21-23, delivered to Taichung Aug. 28-30, Ulsan Sept 1-2, and Yeosu Sept. 6-8.

Japan

Several traders noted the Japanese market continued to be covered by term contracts.

Vietnam

"Buyers were heard sourcing ammonia through spot formula-linked arrangements rather than long-term contracts, with discounts against prevailing formula prices, according to a trader."

Deliveries into Vietnam were heard at $500/mt CFR amid rising FOB Southeast Asia.

The 3,650 mt An Shun Yuan loaded at Zhoushan Sept. 1 and delivered to Haiphong Sept. 9.

Singapore

Deliveries into Singapore were heard at $450/mt CFR amid rising FOB Southeast Asia.

Indonesia

Several traders and suppliers reported a 23,000 mt ammonia cargo moving from Southeast Asia to Mexico, although the concluded price was not disclosed.

Separately, several traders noted that one ammonia plant in Indonesia was undergoing maintenance. "I heard the maintenance will continue until early October," according to a buyer. Several market participants said the outage was expected to lend support to regional prices by tightening spot availability. "Despite limited demand, the Asian market has likely stopped declining. Regional price direction will depend on demand from India and the Far East, Chinese export availability, and support from Western markets," according to a trader.

The 25,000 mt Seamaid loaded at Luwuk Sept. 4-6.

The 23,000 mt Berlian Ekuator loaded at Yeosu Aug. 15-21 and Bontang Sept. 2-4, destined for Lazaro Cardenas.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The 15,000 mt Gas Innovator destined for Bontang after disport at Mailiao Aug. 29-30.

The 5,700 mt Annabella destined for Bontang after disport at Singapore Sept. 2-3.

Australia

Yara's 23,000 mt Leo Sunrise loaded at Dampier Aug. 27-28 for delivery to Orica at Gladstone Sept. 6.

The 5,800 mt Wincanton loaded at Newcastle Aug. 18-19 and delivered to Gladstone Aug. 30 – Sept. 5.

— Shu qi Ng

Americas

Woodside's ammonia plant remains offline as Indonesian cargo heard traded to Mexico

- US Inland terminals, plants withhold Q4 offers
- Brazil registers increased ammonia exports

US

The disconnect between a tight inland market and a somewhat long seaborne supply remained a major theme of conversation in the week ended Sept. 10.

Despite the absence of supply from Woodside's Beaumont New Ammonia, which remains offline after an Aug. 8 "safety event" that required it to shut down, buyers said they were either withholding purchases or easily meeting procurement needs amid ample offers.

"[The] market is very well supplied despite a plant being down here and there," a buyer said.

A trader said $505/metric ton FOB US Gulf is reflective of current pricing.

A supply-side source mentioned an Indonesian cargo heard traded to Mexico as a sign that the tide might turn amid a bullish run in coal, with ample consequences expected for nitrogen exports from China and for the increase in European gas prices. The same source said it expects a Tampa contract for October to be higher than the current $555/mt CFR and also higher FOB pricing from the US Gulf going forward.

In the inland market, a producer said a recent rally in grain prices motivated additional buying for direct application to the soil. Meanwhile, a trader said that many terminals and plants across the Corn Belt were not offering any prompt for fourth-quarter ammonia.

Meanwhile, in Iowa, truckloads were heard at $800-$820/short ton ex-works, and ammonia in the Southern Plains was quoted lower at $700/st EXW.

The 25,000 mt Gas Utopia, loaded in Trinidad and Tobago, called at Tampa Sept. 5-6 for Mosaic, after earlier loading in Trinidad and Tobago and delivering to Colombia.

The 20,000 mt Harvest loaded from CF Industries' Waggaman and Methanex's Beaumont before discharging at Tampa for Mosaic Sept. 8-9.

The 40,000 mt Clipper Saturn arrived at Donaldsonville Sept. 10 to load for OCP from CF Industries.

The 25,000 mt Yara Aesa arrived at Donaldsonville Sept. 8 to load for Yara.

The 25,000 mt Yara Freya arrived at Texas City Sept. 6 to load for Yara from Gulf Coast Ammonia.

The 30,000 mt Green Eternity was called at Stockton Sept. 8 after loading from Koch at Trinidad and Tobago Aug. 21-22.

The 25,000 mt Sombeke is expected at Geismar Sept. 10 after a trip to Chile to deliver ammonia from Gulf Coast Ammonia to Enaex.

Mexico

A 23,000 mt cargo from Indonesia was heard by traders to be moving to Mexico. As the price tag of the transaction has not been made public, market participants widely believed the netback from the trade is likely close to $400-$410/mt FOB Southeast Asia.

Trinidad

The 25,000 mt Navigator Jorf was due at Point Lisas Sept. 8 to load for OCP.

The 15,000 mt Navigator Phoenix is due at Point Lisas Sept. 11, followed by the 15,000 mt Navigator Gusto Sept. 14, to reload for Yara.

The 25,000 mt Ontario is expected at Point Lisas Sept. 15.

Brazil

Brazil exported a total of 70,494 mt of ammonia from January to August, the highest volume for the period since 1998. The increase follows the restart of ammonia production at Petrobras plants that had been idled.

Colombia

The Willard J received a ship-to-ship transfer from the Kaprijke, which had loaded from Gulf Coast Ammonia, and discharged at Barranquilla Sept. 6-8, presumably for Monomeros.

Chile

The 25,000 mt Kaprijke is expected at Mejillones for Enaex Sept. 15 after loading from Gulf Coast Ammonia.

— Thales Schmidt

News

Turkish ammonia prices hit 11-month low on weak demand, Middle East war

- Weak demand drives prices down to $505/mt
- Russian sale near $500/mt signals market shift
- Iranian supply disruptions ease from April peak

Turkish ammonia prices fell to an 11-month low as weak global demand offset the effect of the war in the Middle East on supply.

Platts, part of S&P Global Energy, last assessed ammonia delivered to Turkey at $505/mt CFR Sept. 3, down $20/mt on the day and the lowest price since Oct. 1, 2025.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The drop followed the Sept. 3 sale of 15,000 mt Russian ammonia to a Turkish buyer for September delivery at close to $500/mt CIF net of credit terms.

Market sources said the low price was due to limited demand in West of Suez markets, especially from Europe, leaving traders competing to fill the buyer's requirements.

The Turkish market generally trades at a discount to other CFR locations due to buyers' willingness to purchase Iranian and Russian ammonia.

The delivered price soared to $880/mt CFR in April as the outbreak of the war in the Middle East halted Iranian production and exports.

While production has resumed, deliveries from Iran remain sporadic, with the most recent cargo delivered in July, according to Platts vessel-tracking data.

Uniper advances German hydrogen import terminal on strong market interest

- Sufficient interest to progress Wilhelmshaven project
- Terminal could handle up to 2.6 mil mt/y of ammonia
- Phase 2 to include heads of terms, terminal use pact

Uniper SE's planned hydrogen import terminal at Wilhelmshaven, Germany, has cleared a key commercial milestone after the company secured sufficient capacity reservations from market participants to advance the project, the company said in a statement Sept. 4.

The company said it had secured expressions of interest through its open season process launched in May.

Uniper will now launch a second phase of the project, including issuing heads of terms and developing a terminal use agreement, it said.

The terminal is designed with a modular structure, allowing for an initial import capacity that could be expanded to a maximum throughput of 2.6 million metric tons/year of ammonia, equivalent to approximately 350,000 mt/year of hydrogen, Uniper said.

The modular approach gives the project flexibility to scale in line with demand, reducing upfront capital exposure while preserving optionality for future expansion, it said.

The company could launch further open seasons if the demand is there to scale the facility, it added.

Platts, part of S&P Global Energy, assessed the cost of EU-compliant hydrogen production via alkaline electrolysis in Germany, backed by renewable power purchase agreements, at €10.79/kg ($12.53/kg) Sept. 3.

— James Burgess

Brazil ammonia exports over Jan.-Aug. reach their highest levels since 1998

- Brazil exports 70,494 mt of ammonia
- Petrobras restarts idled nitrogen plants

Brazil exported a total of 70,494 metric tons of ammonia from January to August, the highest volume for the period since 1998, according to data from SECEX, the Brazilian Foreign Trade Secretariat.

The increase in exports from the Aratu port follows the restart of ammonia production at formerly idled Petrobras plants after a dispute with the former lessee, Unigel.

Petrobras has reclaimed control of the nitrogen plants, a move that is part of a push by the Federal Government to increase domestic fertilizer production.

Also over the January-August period, Brazilian imports decreased 20% year over year to 169,628 mt in 2026, the lowest level since 154,758 mt was imported in 2006.

The ramp-up in exports comes as the virtual closure of the Strait of Hormuz after the US and Israeli attack against Iran choked off close to 20% of all ammonia seaborne supply as Persian Gulf producers remain stranded.

China and the US have also increased their exports in 2026 to seize market share amid turbulence, with exports from China up 384,000 mt in the first six months of 2026 compared with 2025, and from the US up 318,000 mt over the same period, according to data from S&P Global Energy CERA.

— Thales Schmidt

SABIC progresses plan for ammonia, urea complex in Saudi Arabia

- Jubail complex adds 2.6 mil mt/year urea output
- SABIC awards $3.46 billion EPC contract
- Carbon capture unit included in facility

SABIC Agri-Nutrients, a subsidiary of state petrochemical producer Saudi Basic Industries Corp., has finalized the investment decision for an integrated ammonia and urea industrial complex in Jubail, Saudi Arabia, the company reported to the Saudi stock exchange, Tadawul, Sept. 10.

The complex will include a 1.2 million metric tons/year ammonia plant, as well as two urea plants capable of producing a combined 2.6 million mt/year, the company said. The complex will also feature a post-combustion carbon capture unit, according to the report.

The project will boost SABIC's urea production capacity by 54%, from a current 4.8 million mt/year to 7.4 million mt/year, the subsidiary said.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Additionally, SABIC Agri-Nutrients awarded Samsung E&A Co. Ltd. the engineering, procurement and construction contract for the complex, the value of which is $3.46 billion, the company said. Construction will begin in the fourth quarter of 2026, and the project is expected to be completed by Q4 2030, it said.

On March 25, the company was approved by the Saudi energy ministry for a feedstock allocation for the projected complex, which is set to be located in the Jubail Industrial City, and announced separately to Tadawul.

"Through this expansion project, we aim to secure reliable and sustainable supplies for our customers, maximize value for our shareholders, contribute to realizing the goals of Saudi Vision 2030, and support global food security," said SABIC Agri-Nutrients CEO Fahad al-Battar in the company's press release dated Sept. 10.

— Lulwa Albuainain

Yara starts up Europe's largest CO2 capture plant at Dutch ammonia site

- Facility liquefies 800,000 mt CO2 annually
- Ships transport emissions to Norwegian seabed
- Northern Lights expands to 5 million mt by 2028

Yara International has started carbon capture operations at its Sluiskil ammonia site in the Netherlands, it said in a statement Sept. 7, marking the start of the largest such plant in Europe.

The facility is designed to capture and liquefy up to 800,000 metric tons/year of CO_2 from ammonia production at the site, shielding those volumes from European carbon taxation under the EU Emissions Trading System.

Platts, part of S&P Global Energy, assessed nearest December EU ETS prices at €84.15/mt ($97.83/mt).

The project marks the first large-scale cross-border industrial CCS link in Europe, connecting Yara's Dutch production hub directly to Norway's Northern Lights permanent subsea storage infrastructure.

Captured CO2 will be liquefied and temporarily stored at Sluiskil before being transported by ship to Øygarden, Norway, where it will be injected 2,600 meters beneath the North Sea seabed.

The project is expected to capture and permanently store approximately 12 million mt of CO_2 over a 15-year period, Yara said.

"The carbon capture facility in Sluiskil proves that large-scale industrial decarbonization is possible today," Svein Tore Holsether, President and CEO of Yara International, said. "As global competition intensifies, Europe must find ways to cut emissions while keeping industry, jobs and critical value chains in Europe."

Yara said the site would enable the company to "further reduce the carbon footprint of its production and support low-carbon value chains across agriculture, industry, energy and shipping."

The inauguration ceremony was attended by EU Commissioner for Climate, Net-Zero and Clean Growth, Wopke Hoekstra, Norwegian Prime Minister Jonas Gahr Støre, Dutch Prime Minister Rob Jetten and Yara's Holsether, underscoring the strategic importance of the cross-border project for European leaders.

"Europe needs practical climate solutions that deliver real emissions reductions while strengthening industrial competitiveness," Hoekstra said in a statement Sept. 7. "This is exactly the kind of project Europe needs to combine climate ambition with a strong and resilient industrial base."

Northern Lights expansion

The 1.5 million mt/year Northern Lights CO2 storage facility in the Norwegian North Sea started commercial operations in 2025, with first supplies from Heidelberg Materials Brevik cement plant.

Heidelberg will supply 400,000 mt/year of CO2 to Northern Lights.

The facility is expected to start receiving further volumes from Ørsted A/S later in 2026. Ørsted has an agreement with Northern Lights to supply 430,000 mt/year from its Asnaes and Avedore biomass power stations in Denmark.

Northern Lights said it would further expand its transport capacity for the second phase of the project — including the addition of larger CO2 tankers from 2028 — which expands capacity to 5 million mt/year.

Stockholm Exergi AB in Sweden and Hafslund Celsio in Norway will supply additional volumes from 2028 and 2029.

Northern Lights is a joint venture between Equinor ASA, TotalEnergies SE and Shell PLC.

— Mollie Gorman, James Burgess

Brazil's August urea imports fall 17% on year as Russian volumes grow: GTA

- Russian imports rise 57% in August
- Qatar volumes surge 227% on month
- Jan-Aug imports fall 23% on year

Brazil's urea imports fell to 508,700 metric tons in August, down 17% from the 613,100 mt imported in August 2025, according to data compiled by S&P Global Energy's Global Trade Atlas.

Imports were also lower on the month, falling 15.6% from 602,400 mt in July.

Russia was Brazil's largest urea supplier in August, with imports from the country totaling 121,800 mt, up 57.4% from 77,400 mt in August 2025. However, the volume was nearly 13% lower on the month, down from 139,900 mt in July.

Nigeria remained the second largest supplier in August despite a sharp on-month decline, with volumes falling 49.1% from 133,300 mt in July. The volume was also 7% lower on the year, the data showed.

Qatar held its third place among suppliers, with volumes rebounding 227.4% on the month to 65,400 mt from 20,000 mt in July. However, imports were lower on the year, falling 11.2%, the data showed.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Over January-August, Brazil's total urea imports declined 23.4% on the year to 2.8 million mt from 3.6 million mt in the equivalent period in 2025, as Brazil-based importers were discouraged by higher prices during the first part of the year due to the conflict between the US and Iran in the Middle East.

In the first eight months of 2026, shipments from Russia rose 32.8% to 602,600 mt from 453,900 mt in the same period of 2025, while shipments from Nigeria dropped 38.5% on the year from 943,700 mt in January-August 2025.

Amid ongoing disruptions at the Strait of Hormuz, flows from Qatar decreased on the year in the January-August period, totaling 167,600 mt, down 66.6% from 501,700 mt in the same period of 2025.

Platts, part of S&P Global Energy, assessed the weekly granular urea price at $434-$459/mt CFR Brazil on Sept. 3.

— Lujan Scarpinelli

Woodside's Beaumont ammonia plant offline after safety incident

- Company shut plant Aug. 8: spokesperson
- Facility produced 279,000 mt in H1 2026
- US Gulf ammonia prices fall to $505/mt

Woodside's Beaumont New Ammonia plant remains offline after an Aug. 8 "safety event" required it to shut down, a company spokesperson told Platts, part of S&P Global Energy, on Sept. 9.

"Woodside confirms Beaumont New Ammonia was safely shut down following a process safety event that occurred on 8 August," the spokesperson said.

No injuries, facility damage or environmental impacts resulted from the event, the spokesperson said.

"An internal investigation is underway to understand the circumstances surrounding the event, and Woodside will continue to engage with relevant regulatory authorities," Woodside said.

The 1.1 million metric ton/year plant in the US Gulf was handed over to Woodside from OCI Global in March, following its construction, in a $2.35 billion sale.

The new plant produced a total of 279,000 mt in the first half of 2026, according to the company's half-year report. The output averaged 69% in the second quarter "due to feedstock constraints arising from construction delays at third-party suppliers," Woodside said.

The downtime comes as the US and China step up their ammonia exports amid the near-closure of the Strait of Hormuz and the resulting loss of around 20% of global seaborne ammonia supply.

Platts, part of S&P Global, assessed the FOB ammonia market in the US Gulf at $505/mt FOB Sept. 8, below prewar levels as the sulfur crisis severely disrupts phosphate and ammonia demand.

— Thales Schmidt

Malaysia Day publishing schedule for Platts Asia Agriculture, Food, Fertilizers and Minerals

The S&P Global Energy office in Penang, Malaysia, will be closed on Wednesday, Sept. 16, in observance of Malaysia Day.

No Asia protein and ammonia daily assessments will be published on that day.

Asia sulfuric acid weekly assessments will be published on the previous business day — Tuesday, Sept. 15.

Normal Penang publishing schedule will resume Thursday, Sept. 17.

For full details of the Platts publishing schedule and services affected, refer to http://www.platts.com/HolidayHome.

For queries, please contact support.energy@spglobal.com.

Platts to launch daily FOB NOLA ammonia barge assessment, update weekly assessment, Sept. 24

Platts, part of S&P Global Energy, will launch a new daily assessment for ammonia barges in New Orleans and refine the specifications of its existing FOB NOLA ammonia barge weekly assessment, effective Sept. 24, 2026.

The new daily assessment will have the following specifications:

Assessment Name: Ammonia FOB NOLA Barge daily

Quality: Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius

Quantity: 5,000 short tons.

Basis and location: FOB barge New Orleans, Louisiana

Timing: Spot. Product to be shipped up to thirty days forward

Frequency: Daily

Unit of assessment: $/st

Timestamp: 16:30 Sao Paulo close, published according to the Sao Paulo publishing calendar

In addition to the launch of the new daily assessment, the existing weekly assessment will be revised to align with the daily assessment's specifications.

The FOB NOLA Brg $/st Wkly (FAMNJ04) assessment is currently assessed on a weekly basis as a low and high range, covering both spot and contract, with a minimum quantity of 1,500 short tons. Effective Sept. 24, the weekly will reflect the lowest and highest of the new FOB NOLA Barge daily assessment published over the preceding trading week (Friday to Thursday).

Platts will also launch a "close" value for the weekly assessment, reflecting market value at 16:30 São Paulo time on Thursdays, mirroring that day's daily assessment.

The changes to the FOB NOLA Brg $/st Wkly assessment are outlined below:

	Current specifications	Effective Sept. 24
Assessment Name	Ammonia FOB NOLA Brg $/st Wkly (FAMNJ04)	Ammonia FOB NOLA Brg $/st Wkly (FAMNJ04)
Quality	Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius.	Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius.
Quantity	Minimum 1,500 st	5,000 st

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Basis and location	FOB barge New Orleans, Louisiana.	FOB barge New Orleans, Louisiana.
Timing	Contract and spot. Product to be shipped up to thirty days forward.	Spot. Product to be shipped up to thirty days forward
Frequency	Weekly	Weekly
Unit of assessment	$/st	$/st
Timestamp	16:30 São Paulo close, published according to the São Paulo publishing calendar.	16:30 São Paulo close, published according to the São Paulo publishing calendar.

The specification changes and assessment launch are intended to more clearly capture market dynamics.

Platts proposed the change on July 13 in a subscriber note published here .

The FOB NOLA Barge daily assessment will be available via Energy Core and the updated FOB NOLA Brg $/st Wkly assessment will continue to appear in the Platts Fertecon US Fertilizer Report and the fixed page FEA0364.

Please send any feedback, questions, and comments to Fertilizer@spglobal.com, and PriceGroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.
