Market Commentary

Nitrogen Global

Global nitrogen markets firm on tight supply, geopolitical tensions

- Asian urea firm on China supply tightness
- Red Sea tensions lift feedstock costs
- NOLA barges trade up to $465/st FOB

Asia

South Asian urea sentiment remained stable Sept. 10, with market participants awaiting the next Indian import tender for fresh demand direction. In Pakistan, seasonal demand remained firm, with most September production already committed.

Chinese granular urea prices stayed firm on strong international demand and tight export availability as second-round quotas neared exhaustion. Meanwhile, prilled urea softened on weak buying interest, although rising coal costs continued to support domestic prices.

Southeast Asian urea prices edged higher amid uncertainty over China's export quotas, tightening regional supply expectations. While demand remained weak in Thailand and Vietnam, sellers maintained firm offers, supported by limited availability and small-volume spot trades.

Chinese ammonium sulfate prices trended upward, driven by strong urea prices and high demand for Brazilian compacted.

However, spot liquidity remains thin as participants await the Sept. 15 new CIQ policy updates. Southeast Asian demand is muted, with Philippine and Vietnamese buyers sidelined amid policy uncertainty and seasonal lulls.

EMEA

EMEA urea prices strengthened in the week ended Sept. 10, as escalating geopolitical tensions in the Red Sea drove feedstock prices significantly higher, raising ammonia/urea production costs across Europe.

This upward momentum was capped for most of the week by bearish demand across Europe. However, at the end of the trading week, this sentiment supported consistent, albeit low-volume, sales in France and firmer trades for North African cargoes destined for Europe short-covering and possibly hedging against anticipated further price increases.

European nitrates markets began to pick up in the week to Sept. 10. Prices were largely stable, supported by high European gas costs, continued logistical issues and tight regional supply, which prevented downward pressure. In France, UAN30% was reported holding firm at €425/mt FCA ex-tank Rouen, though new offers emerged at €430-435/mt FCA ex-tank Rouen. In the Baltic export market, Russian ammonium nitrate stayed supported, with offers heard at $340-$360/mt FOB for September-October shipments, though a producer reported being sold out for September.

Americas

The Americas urea market strengthened on Sept. 10, with New Orleans trading barges up to $465/short ton FOB for September shipments, reflecting global bullishness and a tight US market. Crop price recovery, demand for wheat applications, and limited availability were among the main drivers of price support, according to sources.

In Brazil, market participants indicated higher level prices, with trades reported by sources at the beginning of the week at $465-$470/mt CFR. By the end of the assessed week, offers climbed to $490/mt CFR, with no liquidity seen at that level. Sources were divided about market dynamics, with some noting a stuck demand in the field and others describing increasing activity driven by better farmers' economics.

The Americas nitrates market firmed on renewed buying and tightening supply. In the US, urea ammonium nitrate prices rose on a strong fall application outlook, with NOLA barges at $325/st FOB and Southern Plains Q4 trades at $360-$370/st FCA. Brazil's compacted/granular AS market also strengthened ahead of Chinese export restrictions, with offers at $250/mt CFR and a trade at $262/mt CFR, making AS the most expensive nitrogen product. Brazilian ammonium nitrate was heard around $380/mt CFR. In Mexico, a Chinese UAN cargo sold for $370-$375/mt CFR.

— Staff

Urea Asia

Asian urea markets firm as tight China supply offsets weak demand

- China's export quota depletion tightens supply
- Coal costs drive China domestic prices higher
- Southeast Asian prices edge up as China exports remain constrained

South Asia

South Asian urea sentiment was steady, however, the uncertainty over when the next Indian tender will be issued has kept traders cautious while awaiting fresh demand signals.

In Pakistan, demand was described as stable and seasonal, supported by sizeable inventories of 735,000 mt of urea.

"Pakistan's current season is nearing its end around mid-September, but domestic demand remains firm, with most September production already committed to sales," according to a Pakistani source, suggesting comfortable but manageable supply conditions.

Northeast Asia

Chinese granular urea prices largely remained firm in the week ended Sept. 10, supported by strong international demand and buying interest, while the near exhaustion of second-round export quotas tightened export availability and reinforced market sentiment. A 20,000 mt cargo of granular urea was heard offered to Latin America at $410/mt FOB China.

© 2026 by S&P Global Inc. All rights reserved.

On the other hand, China's prilled urea market declined in the week ended Sept. 10, due to subdued international buying interest for prilled urea despite tighter supply and largely utilized Chinese export quota. Buying ideas received were around $350-$360/mt FOB China for prilled urea.

The domestic prilled urea prices increased primarily on rising coal costs and uncertainty surrounding the delayed third batch of urea export quotas. Shandong ex-works prices rose to Yuan 1,780/mt, supported by tight coal supply and high production costs. "Chinese authorities were concerned that more exports could lift domestic urea prices further," said a Chinese trader.

Southeast Asia

Southeast Asian prices edged higher in the week to Sept. 10, despite weak regional demand, because China's largely exhausted export quota reduced expectations of additional supply. Activity centered on small-volume trades, including Indonesian prilled urea sold at $392/mt FOB for 6,000 mt to the Philippines.

Several traders widely linked the firmer sentiment to uncertainty over Chinese supply.

Brunei granular urea bids were heard higher at $410-$415/mt FOB. "Demand in Thailand stayed subdued, as the prolonged application season reduced urgency among buyers, who continued to purchase mainly for restocking purposes," according to a Thailand-based buyer. The same buyer indicated that a $440-$450/mt CFR Thailand range for granular urea was considered a workable buying level.

Vietnam's demand was also weak amid below-normal rainfall and delayed fertilizer applications. Nevertheless, sellers maintained firm offers as "most market participants remain on the sidelines, awaiting the return of major buyers and suppliers, particularly China and India," said an Asian trader.

— Hui qin Yeoh

Urea Africa

North African urea prices climb on European demand revival

- Egyptian urea trades at $505-$515/mt FOB
- Algeria's Sorfert sells 8,000 mt at $515/mt
- Nigerian market firms on European demand

Egypt

The Egyptian urea market strengthened progressively during the week ended Sept. 10, as a series of sales at escalating prices confirmed a firming trend, driven by producer confidence and a gradual revival in demand from Europe.

The week began quietly, with a producer saying there were no inquiries at the start of the week, with the bid-offer gap around $500-$510/metric ton FOB. However, sellers remained comfortable, holding offers firm in anticipation of a market turn.

This confidence was underpinned by strong European energy prices, and the producer said high LNG prices were a reason to wait for October if necessary.

The market's direction became clear mid-week when MOPCO sold a 5,000 mt cargo of granular urea for September loading at $505/mt FOB Damietta. This was followed by two sales for 10,000 mt and 8,000 mt granular urea for October shipment at $510/mt FOB from Helwan.

After the end of the trading week, AlexFert reported a 10,000 mt granular urea sale at $515/mt FOB for first-half October loading to Europe, solidifying the higher prices.

Algeria

The Algerian granular urea market remained firm during the week, with prices rising after a key sale confirmed producers' prevailing bullish sentiment.

The market's strength was driven by producer confidence and steady, albeit not aggressive, demand from Europe. Sellers showed little willingness to lower their offers, successfully resisting buyer attempts to secure material at lower levels.

The week began with a standoff, as producer offers held in the $515-$520/mt FOB range, while bids were heard closer to $500-$503/mt FOB. The deadlock broke late in the week when Sorfert sold an 8,000 mt cargo of granular urea for late September-early October loading to Europe at $515/mt FOB Algeria.

The sale immediately solidified the market's bullish tone. Following the transaction, offers for subsequent business were heard at $525/mt FOB Algeria, a level supported by buying ideas at $520/mt FOB Algeria, signaling clear acceptance of the higher-price environment.

Nigeria

The Nigerian urea market remained firm in the week ended Sept. 10, as producers held out for higher prices against European buying interest.

The firm sentiment was driven by demand from Europe, where buyers were reportedly engaged in a "lot of short covering," according to a second source. This interest was expressed via buying ideas at $460-$465/mt FOB Nigeria, indicating an upward price direction and validating the sellers' strong stance.

By the end of the week, amid overall bullish sentiment in the granular urea markets, the Nigerian market had moved in sellers' favor, with indicative values firming into the high $460s/mt FOB Nigeria.

Urea Middle East

Middle East urea trades from Red Sea port as geopolitical tensions escalate

- 30,000 mt of urea trades at high $440s/mt FOB Yanbu
- Iranian producers increase offers $10 to $345/mt

Middle East

The Middle East urea market, excluding Iran, was defined by a sharp geographical divide in the week ended Sept. 10, as escalating geopolitical risks created a significant premium for cargoes loading in the Red Sea over those loading in the Arab Gulf.

The primary market driver was the persistent threat to shipping in the region, which supported prices for cargoes loaded outside the Strait of Hormuz. This was highlighted by a key sale from a Middle East producer, which sold 30,000 metric tons of granular urea from Yanbu for early October shipment in the "high $440s/mt FOB," a source close to the producer said on Sept. 9.

The trade was widely heard in the market, and several market participants considered its price representative of the regional market.

In contrast, cargoes loading from inside the Arab Gulf faced continued downward pressure due to high insurance costs and logistical risks. Indicative values for material inside the Gulf were heard "below $420/mt FOB," another source close to another Middle Eastern urea producer said on Sept. 9. The price marked a substantial discount to the Red Sea.

Before the trade, buying interest for Arab Gulf granular urea was heard at $400/mt FOB against selling ideas in the low $400s/mt, highlighting the ongoing buyer resistance to paying higher prices for riskier shipments.

Iran

The Iranian urea market was caught in a tug-of-war in the week ended Sept. 10, as producers pushed offer levels higher, but escalating logistical disruptions and cautious buying interest capped the upward momentum.

Producers raised their official offer levels to around $345/mt FOB Iran, up about $10/mt from the previous week.

However, the market's underlying weakness was exposed when a tender failed to conclude a sale at the same $345/mt FOB target.

The unsuccessful tender highlighted that "buyers remain cautious even at a significant discount to alternative origins," a market participant familiar with the Iranian market said on Sept. 10.

The primary driver for this buyer's hesitancy was the severe deterioration in regional logistics.

"Shipping conditions for Iranian urea exports have deteriorated significantly compared with last week, as regional tensions and military activity have intensified," the same source said.

These risks, including reported attacks on oil tankers, have tightened vessel availability and increased insurance costs, largely offsetting the price advantage of Iranian material.

The supply side was further constrained by ongoing production issues, with several major plants operating at reduced rates or remaining offline due to technical problems and electricity supply cuts, the same source added.

Urea Europe, Baltic and Black Sea

European urea prices climb on energy costs and tight supply outlook

- French urea prices climb to €520/mt FCA
- Baltic granular urea reaches $425-$440 FOB
- Black Sea tender at $465 FOB - unconfirmed

France

The granular urea market in La Pallice, France, continued its firming trend in the week to Sept. 10, with prices climbing as sellers held firm on offers amid soaring energy costs and strong producer sentiment, despite a slowdown in spot trading activity.

The positive momentum was largely driven by high energy prices, with rising TTF natural gas and Brent crude futures, which increased production costs for competing nitrogen fertilizers and bolstered producer confidence. Market sentiment was described

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

as "very firm," with a Europe-based trader citing expectations of "good demand for Q4" and "tight supply" as key supports. This confidence allowed producers to maintain higher offer levels throughout the week.

Despite firm pricing, market participants described spot activity as "very quiet" early in the trading week. This followed a strong sales period in the previous week, where "retailers/coops purchased, but not farmers," according to a supplier in the French market Sept. 8. This suggested that the current strength was being driven by distributor positioning and restocking rather than immediate end-user demand.

The price progression throughout the week reflected this underlying strength. After a quiet start with indications heard in the €510-€515/metric ton FCA range, sales were reported mid-week at €512-€515/mt FCA La Pallice. By the end of the week, offers had risen to €520/mt FCA and trades reported at that price.

Baltic Sea

The Baltic urea market firmed in the week to Sept. 10, with granular urea prices climbing steadily while prilled urea held a more stable range. The upward momentum was driven by persistent demand from Brazil, although rapidly increasing freight costs significantly eroded sellers' netbacks and tempered the overall bullishness.

Prilled urea prices remained largely rangebound, with indicative values holding between $370-$385/mt FOB for most of the week. A trade was heard to have netted back to $375-$380/mt FOB Baltic, while buying interest was reported at $360/mt FOB against producer offers that reached as high as $400/mt FOB by the end of the week.

Granular urea experienced a more pronounced increase, driven by strong demand from Latin America. After starting the week with values around $400/mt FOB, prices rose consistently. By the end of the week, indicative values were heard in the $425-$440/mt FOB range, with bids at $390/mt FOB. Reflecting the bullish sentiment, producer offers surged to as high as $470/mt FOB Baltic.

While the market was supported by buying interest from Brazil, sellers faced significant pressure from logistics costs. A trader said Sept. 10 that "freights are up very much. So even $480/mt CFR Brazil won't give anything better than $420 FOB," highlighting the challenge of achieving higher netbacks.

The premium for automotive-grade urea was heard stable at $50-$60/mt above prilled urea prices.

Black Sea

The Black Sea urea market found a firm price direction in the week to Sept. 10, as a key tender result provided a clear benchmark and injected liquidity into a previously quiet market.

The primary market mover was the announcement of the State Oil Company of Azerbaijan Republic's sales tender for 30,000 mt of non-Russian granular urea, which was heard to have concluded at $465/mt FOB Batumi for late September-early October loading, but results remained unconfirmed at the time of writing this report.

At the end of the week, spot activity was heard, with a 6,000 mt cargo of Turkmen-origin urea traded at $480/mt CFR Constanta, which netted back to approximately $455/mt FOB Poti. The market faced significant competition from other origins, with Turkey heard having booked around 300,000 mt of Chinese and Russian urea at levels around $470/mt CFR, limiting the upside for Black Sea sellers.

In the Ukrainian domestic market, offers for imported granular urea were heard in a range of 30,000-32,000 hryvnia/mt FCA.

— Elisavet Levogianni

Urea Americas

Urea prices continue their climb in the Americas

- US urea barges hit $465/st FOB for Sep
- Brazil CFR levels reach $470/mt, offers increase further
- Deals close in Mexico, Argentina

Urea continued to climb in the Americas in tandem with a bullish global market tone, then consolidated during the week to Sept. 10 in producer countries. The US reached $465/st FOB at the end of the assessed period, with Brazil CFR gradually increasing to a $470/mt level.

Following the Labor Day holiday, barges in the New Orleans reference market traded from $450/st FOB on Sept. 8 to $465/st FOB on Sept. 10, amid a price improvement in crop prices, particularly corn and wheat. Those encouraged positive sentiment, according to sources.

The market has not been as high since the beginning of June. Other reasons putting pressure on market prices: sources highlighted the energy price increases as concerns remain on ongoing geopolitical conflicts.

A "dry" lineup described for September, the import level during the year, and re-exports balancing those volumes, also provided momentum to bullishness.

According to a trader, "the US is around 400,000 mt below previous years' levels." Therefore, he sees inventory building and position-taking before winter, along with current demand for wheat, as two key factors behind the recent increase in the US.

Terminals along the Mississippi River also raised values, reflecting reposition costs as each place is with "thin inventories," as said by a second trader.

"It is good that we are seeing barges traded at good prices for December, January, showing farmers' confidence, " a third trader said.

According to several sources, as demand has emerged in Central America, Brazil continues to be in the spotlight. Expectations for the South American market are high, given the short nitrogen availability due to low imports during the first half of the year.

Even at current higher prices, Urea is favored in light of strong ammonium sulfate prices and its status as a less concentrated substitute nitrogen source.

Several trades were reported by sources at the beginning of the week between $465/mt and $470/mt CFR from China and

© 2026 by S&P Global Inc. All rights reserved.

other origins, with no further details. However, prices moved up by the end of the assessed period: Offers climbed up to $490s/mt CFR, with no liquidity seen at that level.

Sources were divided about market dynamics, with some noting a stuck demand in the field and others describing increasing activity driven by better farmers' economics.

A Brazilian trader reported sales of a total 20,000 mt at DPU prices equivalent to $480s/mt CFR.

Another trader placed his offers at $485-$490/mt CFR for non-Chinese product, September laycan. As he received a bid at $482/mt, he was not willing to accept. Chinese urea for November delivery was estimated at the $460s/mt CFR, sources said.

A third Brazil-based trader noted low demand among farmers, weighing factors such as soybean planting, expectations for corn and climate.

Finally, a granular urea trade was reported for the West Coast Mexico at $460-$465/mt CFR, for 35,000 mt from China.

A deal also closed in Argentina at $490-$495/mt CFR, a participant said, originated in Africa.

"Prices are climbing everywhere, and this means Brazil will need to support the increases to attract tons," the Brazilian trader said, also citing paper market rising values.

— Lujan Scarpinelli

Nitrates Asia

China ammonium sulfate prices rise amid export quota concerns

- Export quotas tighten supply availability
- Brazilian demand drives compacted prices up
- Southeast Asian buyers delay amid uncertainty

The Chinese ammonium sulfate market exhibited an upward trend in the week ended Sept. 10, with limited closed deals.

Most market indications were heard at $195–$200/mt FOB China. In the standard-grade caprolactam ammonium sulfate market, a Southeast China-based trader noted that the market is silent, with participants remaining highly cautious of the offers.

Several China-based producers noted that current export quotas are very limited, prompting a wait-and-see approach ahead of anticipated Customs Inspection and Quarantine (CIQ) policy updates after Sept. 15.

A Southeast China-based trader noted that bullish global urea levels have pushed caprolactam-grade offers higher.

Another Southeast China base trader noted indicative offers heard as high as $215/mt FOB Southeast China. However, another China-based trader added that buyers are still targeting $185/mt FOB or lower.

An unconfirmed deals heard for 5,000–10,000 mt of caprolactam-grade ammonium sulfate at the $185–$190/mt FOB level for September shipment. The same trader said that major buyers in India and Turkey are currently inactive, resulting in limited inquiries. The market could face downward pressure in the coming weeks.

In the domestic market, coking-grade ammonium sulfate prices fell to Yuan 835–900/mt ex-works this week. On the demand side, a Southeast China-based analyst noted that coking-grade prices are declining as compactors become more cautious about procuring raw materials and submitting customs declarations before the mid-month deadline. The same analyst indicated that high-end coking-grade tenders lapsed, as rare earth producers are also acting cautiously amid fears of CIQ policy changes after Sept. 15.

For the compacted ammonium sulfate market, most market indications were heard higher at $205–$210/mt FOB China. A China-based trader noted that prices continue to rise amid higher netbacks, with delivery demand in the Brazilian market providing major support. The same trader noted that Brazilian buyers remain active, and traders are rushing to secure tonnage ahead of Sept. 15 to avoid potential policy shifts.

A southeast China-based producer echoed this statement. Prices are expected to remain firm and bullish if the global urea trend holds. However, export quotas remain a bottleneck; a Southeast China-based producer noted that offers to Brazil are consuming their remaining quotas, which are now very limited. Due to this tightness, a China-based analyst noted that one of the largest producers in Southeast China postponed its sales tender today.

In Southeast Asia, price indications were mostly heard at $220–$235/mt CFR Southeast Asia. In the Philippines, a regional buyer noted that while procuring via re-export is not strictly illegal, it requires a Certificate of Origin for VAT exemption; without it, buyers face substantial unnecessary fees. The same buyer indicated that the Philippines is currently in its off-season, with very low demand; these elevated offers are considered nominal and untested.

Meanwhile, in Vietnam, market activity remains at a standstill. A Southeast Asia buyer noted that Vietnamese buyers are firmly in a wait-and-see mode, holding off on procurement until the Chinese quota situation clarifies after Sept. 15.

— Yin kheng Lee

Nitrates Europe

European fertilizer prices move up due to high production costs, tighter supply

France

The market for nitrate fertilizers in France was reportedly active, supported by multiple trades in the week to Sept. 10.

Trades of ammonium nitrate (AN33.5%) were heard at €535-€540/mt CPT Bulk France for December-January delivery.

Market participants said producers sold out for the coming months resulting in offers for later in the year.

In the market urea ammonium nitrate (UAN 30%), sources reported slow demand with market at around €425/mt FCA ex-tank Rouen and at offers reported at €430-€435/mt FCA ex-tank Rouen for September to December shipment at the sellers option. Sources said demand for UAN will pick up soon.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The cost of natural gas in Europe climbed throughout the week, pushing up the theoretical cost to produce ammonia and nitrogen fertilizer in the region.

The estimated cost of domestic ammonia production soared in the week to Sept. 10, as natural gas prices continued their steady march upwards. The Dutch TTF front-month contract closed Sept. 9 at €79.39/MWh, up almost €6/MWh on the previous week. The latest closing price, equivalent to more than $27/MMBtu, suggested a total cost of gas per metric ton of ammonia of almost $920, and a total estimated cost of production, including carbon costs, of around $995/mt.

Germany

In the market for calcium ammonium nitrate (CAN27%) in Germany, offer levels were reportedly varied, depending on the region.

Offers heard in the South, West and East of Germany were heard at $375-$380/mt CIF inland. Meanwhile offers reported in the North, specifically Northwest Germany were heard at €400-€410/mt CIF inland.

Though, buyer interest in the German CAN market, remained absent, therefore no fresh trades were heard during the week.

A distributor said CAN prices rose significantly during the period. Initially indicated at €370-€380/mt CIF inland in the Benelux, values climbed rapidly as buying activity increased. One Dutch distributor reported purchasing barges at €380/mt CIF inland before paying €400/mt CIF inland only days later as the market strengthened. Western European producers subsequently increased offers to €400/mt CIF inland, with current indications reaching €410/mt CIF inland as of Sept. 9. The distributor reported the same levels for Northwest Europe.

Rising gas costs were cited as a reason why sellers were holding firm, alongside producers using Middle East conditions to support higher price indications. The distributor said liquidity was limited, with only some participants taking positions and activity was expected to be more active once the straight month opens, when prices may ease.

No new offers for German urea ammonium nitrate (UAN 28%) emerged this week.

Belgium

The European standard capro-grade ammonium sulfate (AS) market picked up in the week to Sept. 10.

A producer was heard offering standard capro-grade AS at €270/mt FOB Northwest Europe.

A buyer indicated a bid at €260-€265/mt FOB Northwest Europe. The buyer said sentiment this week had been slightly bullish as fewer tons of AS had been sent from China into Europe due to Inspections.

Higher gas costs and a strong sulfur values were also cited as factors supporting AS demand.

Other producers were heard offering at €250/mt FOB for September shipment.

In the European granular-grade AS market, a producer reported offers at €330/mt FOB.

— Erin Mcintosh

Nitrates Baltic, Black Sea and Mediterranean

Nitrogen fertilizer prices rise across Black Sea amid firmer urea, gas levels

- Russian AN producers sell out Sep
- Poti AN prices climb to $370/mt FOB
- Turkish AS offers rise to $250/mt CFR

Baltic

The export market for Russian ammonium nitrate stayed firm in the week to Sept. 10, with new trades reported.

Producers remained sold out for September.

A producer was heard offering AN at $340-$360/mt FOB Baltic.

Another producer said AN 34.4% was sold in the low $340s/mt FOB Baltic equivalent for 8,000 mt, to the USA, with shipment scheduled for September through early October.

The same producer also reported selling calcium ammonium nitrate (CAN 27%) in the mid-$260s/mt FOB for 15,000 mt to Turkey, for September to early October shipment.

In the UAN 32% market, a producer reported stable offers week over week at $300-$310/mt FOB, supported by firm urea values.

Black Sea

The AN market in Poti rose in the week leading up to Sept. 10, with market participants citing higher levels due to an uptick in urea and gas prices.

A producer and a trader reported the market at around $370/mt FOB Poti. A second trader indicated the market at around $360-$385/mt FOB Poti and was offering at $380/mt FOB, with some interest at this level.

Meanwhile, the Ukrainian fertilizer market remained inactive.

A producer told Platts there has been no change in the last week, though there were some signs that demand will pick up as agrarians were reportedly checking the market.

The producer offers for ammonium nitrate (AN 34.5%) remained at Hryvnia 27,600/mt CPT, with a Hryvnia 500/mt discount available for regions close to Ukraine's western borders.

Urea ammonium nitrate (UAN 32%) prices were offered at Hryvnia 26,600/mt on a CPT or DDP basis within a 200 km.

Calcium ammonium nitrate (CAN 27%) prices were offered at Hryvnia 20,900/mt CPT for August delivery.

The producer said these levels are currently unworkable as demand in Ukraine remains absent due to a lack of exporting availability for crops. Seaports have not resumed operations.

Turkey

The Turkish import market for standard capro-grade ammonium sulfate, AS, was quiet in the week to Sept. 10.

A producer indicated the market up at $250/mt CFR Turkey, up $10/mt from the previous week due to tight availability in China.

No firm bids or offers were reported, as price levels remained dependent on market dynamics and availability.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The producer reported some buyer interest but said demand had not yet materialized, as buyers continued to monitor the market and await a clearer direction.

— Erin Mcintosh

Nitrates Americas

Americas nitrates market firms as US UAN sees renewed buying, Brazil AS tightens

- US UAN market firms on fall application demand outlook
- Brazil AS prices rise on tight China availability
- Chinese UAN sold to Mexico at $370-$375/mt CFR

US

The US UAN market firmed in the week ended Sept. 10, with sources saying the product had seen the most activity over the last two weeks with grains rallying and retailers starting to step in.

New Orleans UAN barge values were stable at $325/short ton FOB, with active grain chartering indicating broad-based buying interest across the US. The urea-UAN price differential was noted as relatively tight, supported by firm nitrate prices in Europe. Sources saw room for urea to move higher, with UAN expected to follow.

In the Southern Plains, prices firmed sharply over the past week. Sales were heard at $335/st FCA late in the week prior, and sources indicated third-quarter levels have since increased further. Q4 was heard at $360-$370/st FCA, while near-term prompt levels were indicated at $340-$350/st.

Paper trades for March delivery were reported at $350/st and $362.50/st FOB NOLA for 1,500 st each.

On the demand outlook, participants saw an earlier harvest as constructive, providing a wider weather window for fertilizer application. The US corn harvest was reported as 5% complete, ahead of the 3% five-year average, while the spring wheat harvest reached 86% completion. Sources expect a bigger fall application season as a result.

Brazil

The Brazilian ammonium sulfate market firmed as offers rose ahead of China's Sept. 15 export restriction deadline, which is expected to tighten availability and lift nitrogen values more broadly.

Offers to Paranaguá and Santos were heard at $250/mt CFR. An 18,000 mt parcel to Santarém was reported sold at $262/mt CFR. Bids were heard at $235/mt CFR, but traders dismissed them as unworkable.

"I don't believe anything close to $240/mt is possible anymore," one trader said, noting that bids at $240/mt were rejected by sellers earlier in the week.

The tightening supply has reshuffled the nitrogen hierarchy.

"Now ammonium sulfate is the most expensive, while urea is cheaper, followed by ammonium nitrate," a second trader said, calling it a reversal from last week.

A third source said Brazil's "just-in-time" buying habits could create logistical bottlenecks.

Meanwhile, ammonium nitrate was heard around $380/mt CFR Brazil, with one producer sold out for September and expecting higher pricing in October.

In Mexico, a shipment of Chinese UAN was reported to have been sold at $370-$375/mt CFR to multiple ports.

News

Egypt overtakes Germany as France's top urea supplier in July: GTA data

- Egypt triples urea exports to France in July
- Germany ships 28.7% more in Jan–July 2026
- Total French imports fall 22.2% through July

France's urea imports from Egypt surged in July 2026, even as overall arrivals slipped year over year, according to S&P Global Market Intelligence's Global Trade Atlas, with the top three suppliers – Egypt, Germany and Belgium – accounting for the bulk of volumes into the French market over the month.

Egypt ranked as France's largest urea supplier in July 2026, with imports reaching 41,500 mt, up 77.6% from 23,400 mt in July 2025. On a month-over-month basis, flows from Egypt more than tripled, rising 278.7% from 11,000 mt in June 2026 to 41,500 mt in July 2026.

Over the first seven months of 2026, however, Egyptian urea shipments into France totaled 204,100 mt, down 11.3% from 230,100 mt in January–July 2025, indicating that the strong July performance followed weaker volumes earlier in the year.

Germany was France's second-largest urea supplier in July 2026, exporting 26,600 mt, a 7.4% increase from 24,700 mt in July 2025. Month over month, imports from Germany edged up 4.8% from 25,300 mt in June.

German exports to France rose to 131,000 mt in January–July 2026 from 101,900 mt in the same period of 2025, a 28.7% increase, underscoring Germany's growing role in France's supply mix over the first seven months of the year.

Belgium ranked third among France's urea suppliers in July 2026, with volumes climbing to 19,000 mt from 6,500 mt in July 2025, a rise of 190.7%. Month-over-month imports from Belgium also increased 438.6% from 3,500 mt in June 2026.

In the year to July, Belgian exports to France totaled 57,600 metric ton, up 8.6% from 53,000 mt in January–July 2025, reflecting a moderate expansion in cumulative flows alongside the strong July uplift.

Total volumes lag five-year average

France's total urea imports in July 2026 stood at 132,600 mt, down 14.6% from 155,300 mt in July 2025. However, compared

with June 2026, total imports more than doubled, increasing 115.1% from 61,600 mt.

Over January–July 2026, France imported 691,700 mt of urea, a 22.2% decline from 889,500 mt in the same period of 2025. Against the five-year average of 934,000 mt for the first seven months, this represents a 26.0% drop, leaving year-to-date imports significantly below recent historical levels.

Platts assessed granular urea in the range of €450-€535/mt FCA France in July 2026.

Platts assessed granular urea at €510/mt FCA France on Sept. 9, unchanged day-on-day.

France - urea imports

US DATA: Urea imports rise 5.6% in Jan.-July as latest inflows increase

- Imports reach 4.2 million mt over the period
- July imports jump 150.7% to 296,000 mt total
- Algeria surges as July's top supplier

US urea imports from January through July totaled 4.2 million metric tons, up 5.6% from 3.9 million mt in the same period a year ago, according to S&P Global Energy's Global Trade Atlas, despite the impact of the Middle East war on prices.

Within the period, July imports stood out at 296,000 mt, more than doubling year on year from 118,100 mt and increasing 143% month over month from 121,800 mt in June.

As the conflict between the US and Iran unleashed in February, the market had already purchased its needs for the strong spring season consumption.

In July, Algeria emerged as the top supplier, exporting 191,900 mt, up from 2,700 mt in July 2025, a rise of 7,011%. Over January-July, Algerian exports to the US reached 490,500 mt, up 19.5% from 410,300 mt in the same period of 2025.

Canada ranked second in July 2026, exporting 48,200 mt of urea to the US, compared with 24,700 mt in July 2025, an increase of 95.3%. For January-July 2026, Canada's exports to the US edged up 1.9% to 300,300 mt from 294,700 mt in the first seven months of 2025.

Meanwhile, Russian flows strengthened, securing the third place as supplier for the US in the urea market in July 2026, with exports rising to 27,000 mt from 23,500 mt in July 2025, a 14.8% increase year on year.

In the first seven months of 2026, Russia's exports to the US totaled 1.4 million mt, up 7% from 1,389,700 mt in January–July 2025.

Demand expectations before winter

Some market participants see a tighter market ahead, with a "thin lineup" for September as inventories are built for the coming season demand, in anticipation for the winter river closing.

Better crop prices are proving support for nitrogen prices along with supply concerns and ongoing geopolitical conflicts, a source told Platts.

Platts, part of S&P Global Energy, assessed the daily granular urea price at $450/mt FOB on Sept. 8.

— Lujan Scarpinelli

Woodside's Beaumont ammonia plant offline after safety incident

- Company shut plant Aug. 8: spokesperson
- Facility produced 279,000 mt in H1 2026
- US Gulf ammonia prices fall to $505/mt

Woodside's Beaumont New Ammonia plant remains offline after an Aug. 8 "safety event" required it to shut down, a company spokesperson told Platts, part of S&P Global Energy, on Sept. 9.

"Woodside confirms Beaumont New Ammonia was safely shut down following a process safety event that occurred on 8 August," the spokesperson said.

No injuries, facility damage or environmental impacts resulted from the event, the spokesperson said.

"An internal investigation is underway to understand the circumstances surrounding the event, and Woodside will continue to engage with relevant regulatory authorities," Woodside said.

The 1.1 million metric ton/year plant in the US Gulf was handed over to Woodside from OCI Global in March, following its construction, in a $2.35 billion sale.

The new plant produced a total of 279,000 mt in the first half of 2026, according to the company's half-year report. The output averaged 69% in the second quarter "due to feedstock constraints arising from construction delays at third-party suppliers," Woodside said.

The downtime comes as the US and China step up their ammonia exports amid the near-closure of the Strait of Hormuz and the resulting loss of around 20% of global seaborne ammonia supply.

Platts, part of S&P Global, assessed the FOB ammonia market in the US Gulf at $505/mt FOB Sept. 8, below prewar levels as the sulfur crisis severely disrupts phosphate and ammonia demand.

Brazil's ammonium sulfate imports from China plunge sharply: GTA data

- Brazil's AS imports drop 56% in August
- China ships 402,000 mt, down 56% on year
- Year-to-date volumes exceed five-year average

Brazil's total ammonium sulfate (AS) imports fell sharply in August, driven by a steep drop in shipments from China in and over January-August compared with the same periods in 2025, according to S&P Global Energy's Global Trade Atlas Sept. 8.

Total Brazilian AS imports fell to 402,600 metric ton in August 2026 from 916,700 mt in August 2025, down 56.1%, while cumulative imports over January-August 2026 reached 3,297,600 mt, a 12.5% decrease from 3,767,100 mt in January-August 2025.

China remained Brazil's largest AS supplier in August 2026, shipping 402,200 mt. This was down 56.1% from 916,100 mt in August 2025. On a year-to-date basis, China's exports to Brazil totaled 3,294,100 mt in January-August 2026 versus 3,762,500 mt in the same period of 2025, a 12.4% decrease. Month on month, volumes from China fell from 483,300 mt in July 2026 to 402,200 mt in August 2026, a 16.8% decline.

Spain held the second position in August 2026, exporting 300 mt of AS to Brazil, flat in volume terms versus 300 mt in August 2025 but showing a reported 14.3% decrease. Over January-August 2026, Spain shipped 1,300 mt to Brazil, down 51.9% from 2,700 mt in January-August 2025. Month on month, Spanish exports increased from 100 mt in July 2026 to 300 mt in August 2026, up 281.0%.

Germany ranked third, supplying 100 mt of AS to Brazil in August 2026, compared with no reported volume of imports from Germany in August 2025. On a year-to-date basis, Brazilian AS imports from Germany decreased from 400 mt in January-August 2025 to 200 mt in January-August 2026, down 44.7%. Month on month, German shipments to Brazil were steady, at 100 mt in both July and August 2026, a marginal 0.6% decline.

Brazil's total AS imports in August 2026 were 402,600 mt, down 56.1% from 916,700 mt in August 2025 and down 16.8% from 484,000 mt in July 2026. Cumulative imports for January-August 2026 reached 3,297,600 mt, 12.5% lower than 3,767,100 mt over January-August 2025. Despite this reduction, January-August 2026 import volumes remained above the five-year average of 2,631,000 mt for the same period, with a deviation of 25.3%.

Platts, part of S&P Global Energy, assessed compacted/granular AS CFR Brazil at $215-$240/mt in August 2026. For the week ending Sept. 3 the assessment was $235-$240/mt CFR Brazil.

Brazil ammonia exports over Jan.-Aug. reach their highest levels since 1998

- Brazil exports 70,494 mt of ammonia
- Petrobras restarts idled nitrogen plants

Brazil exported a total of 70,494 metric tons of ammonia from January to August, the highest volume for the period since 1998, according to data from SECEX, the Brazilian Foreign Trade Secretariat.

The increase in exports from the Aratu port follows the restart of ammonia production at formerly idled Petrobras plants after a dispute with the former lessee, Unigel.

Petrobras has reclaimed control of the nitrogen plants, a move that is part of a push by the Federal Government to increase domestic fertilizer production.

Also over the January-August period, Brazilian imports decreased 20% year over year to 169,628 mt in 2026, the lowest level since 154,758 mt was imported in 2006.

The ramp-up in exports comes as the virtual closure of the Strait of Hormuz after the US and Israeli attack against Iran choked off close to 20% of all ammonia seaborne supply as Persian Gulf producers remain stranded.

China and the US have also increased their exports in 2026 to seize market share amid turbulence, with exports from China up 384,000 mt in the first six months of 2026 compared with 2025, and from the US up 318,000 mt over the same period, according to data from S&P Global Energy CERA.

Brazil's August urea imports fall 17% on year as Russian volumes grow: GTA

- Russian imports rise 57% in August
- Qatar volumes surge 227% on month
- Jan-Aug imports fall 23% on year

Brazil's urea imports fell to 508,700 metric tons in August, down 17% from the 613,100 mt imported in August 2025, according to data compiled by S&P Global Energy's Global Trade Atlas.

Imports were also lower on the month, falling 15.6% from 602,400 mt in July.

Russia was Brazil's largest urea supplier in August, with imports from the country totaling 121,800 mt, up 57.4% from 77,400 mt in August 2025. However, the volume was nearly 13% lower on the month, down from 139,900 mt in July.

Nigeria remained the second largest supplier in August despite a sharp on-month decline, with volumes falling 49.1% from 133,300 mt in July. The volume was also 7% lower on the year, the data showed.

Qatar held its third place among suppliers, with volumes rebounding 227.4% on the month to 65,400 mt from 20,000 mt in July. However, imports were lower on the year, falling 11.2%, the data showed.

Over January-August, Brazil's total urea imports declined 23.4% on the year to 2.8 million mt from 3.6 million mt in the equivalent period in 2025, as Brazil-based importers were discouraged by higher prices during the first part of the year due to the conflict between the US and Iran in the Middle East.

In the first eight months of 2026, shipments from Russia rose 32.8% to 602,600 mt from 453,900 mt in the same period of 2025, while shipments from Nigeria dropped 38.5% on the year from 943,700 mt in January-August 2025.

Amid ongoing disruptions at the Strait of Hormuz, flows from Qatar decreased on the year in the January-August period, totaling 167,600 mt, down 66.6% from 501,700 mt in the same period of 2025.

Platts, part of S&P Global Energy, assessed the weekly granular urea price at $434-$459/mt CFR Brazil on Sept. 3.

Egypt urea May exports surge on India demand despite yearly drop: GTA data

- Egypt's May urea exports surge 59.4% to 478,000 mt
- India becomes largest buyer with 381,800 mt
- UK imports rise 98.5% while Turkey drops 81.3%

Egypt's urea exports increased sharply in May 2026, with total seaborne volumes reaching 478,000 mt, up 59.4% year on year from 300,000 mt in May 2025, according to S&P Global Energy's Global Trade Atlas. Over the first five months of 2026, however, exports eased by 13.1% to 1,512,700 mt compared with 1,741,300 mt in the same period of 2025. On a month-over-month basis, Egypt's exports more than doubled from 181,400 mt in April 2026, rising 163.5% in May.

India was the leading destination for Egyptian urea in May 2026, taking 381,800 mt after recording no imports from Egypt in May 2025. This also marked a substantial increase from April 2026, when India imported 21,100 mt, representing a 1,706.5% month-over-month increase.

Over January–May 2026, India's imports from Egypt totaled 507,300 mt, compared with no recorded volumes in the same period of 2025, making India the largest single buyer over the first five months of the year and the key driver behind Egypt's higher May export total.

The United Kingdom ranked second in May 2026, importing 17,400 mt of urea from Egypt, up 98.5% from 8,700 mt in May 2025. There were no recorded UK imports from Egypt in April 2026, so the May volume represents a resumption of flows into this market.

In the January–May period, UK imports were broadly steady year over year, edging up 0.8% to 68,200 mt from 67,600 mt during the same period of 2025. This places the UK among the consistent European buyers of Egyptian urea so far in 2026.

Turkey slips to third as flows ease

Turkey was the third-largest destination for Egyptian urea in May 2026, taking 12,500 mt, down 81.3% from 67,000 mt in May 2025. Despite the year-over-year decline, May shipments to Turkey were higher than April 2026 volumes of 5,100 mt, reflecting a 145% month-over-month increase.

From January to May 2026, Turkey imported 119,000 mt of Egyptian urea, down 58.6% from 287,400 mt over the same period in 2025, and contributing to the overall reduction in Egypt's year-to-date export total.

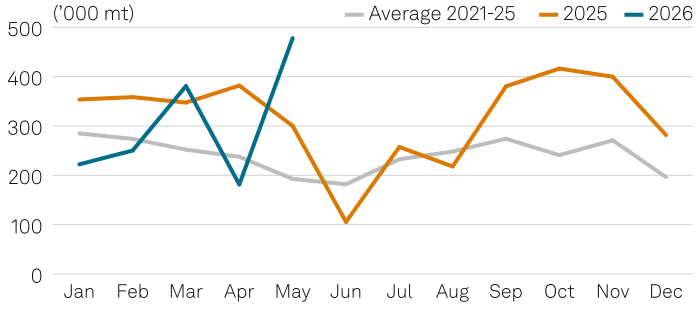

Exports sit above the five-year average despite the year-to-date decline

While Egypt's total urea exports in January–May 2026 fell 13.1% year over year to 1,512,700 mt, they remained 21.9% above the five-year average of 1,241,000 mt for the period. The strong May performance, led by India's 381,800 mt intake and supported by renewed flows to the UK and higher month-on-month shipments to Turkey, offset weaker exports to several European destinations including Italy, Spain, France and Greece.

Platts, part of S&P Global Energy, assessed granular urea FOB Egypt at $625–850/mt in May 2026.

Also, Platts assessed granular urea FOB Egypt at $505/mt on Sept. 8, unchanged day over day.

France earmarks €145M for nitrogen fertilizer purchases, extends subsidies

- Traders split on subsidy's impact for farmers
- FNSEA says the subsidy support falls short of needs

The French government has assigned €145 million to help farmers purchase nitrogen fertilizer through Dec. 31, according to local media, extending a deadline previously set for Oct. 1.

The new fund follows an emergency agricultural support package worth €1.16 billion announced by the government on Sept. 4, intended to offset higher nitrogen input costs as farmers work to restore crops and land following a summer of heat and droughts.

Market participants were divided on whether the subsidy extension would trigger a significant increase in demand or alleviate issues impacting farmers.

A France-based trader said demand was likely to strengthen as farmers receive more money to invest in fertilizers, yet a second trader said the measure would offer "absolutely no" improvement for farmers.

The National Federation of Agricultural Holders' Unions told local media that it fell short of what is needed, with total agricultural losses this year exceeding €10 billion.

The extension through to Dec. 31, 2026, would give farmers additional time to replenish fertilizer stocks ahead of the next planting cycle, local media added.

The support package also includes a €235 million "agricultural recovery fund" to provide targeted support for the worst-affected farms.

Platts, part of S&P Global Energy, assessed UAN30% at €415/mt FCA ex-tank Rouen and DAP at €875/mt FCA France on Sept. 3.

Socar offers urea from Georgia, Turkey ports for H2 Sept.-H1 Oct. delivery

- Socar offers 50,000 mt urea in tender
- Delivery scheduled for September-October period
- Bids close September 9 from two ports

Seller: Socar, Azerbaijan

Specs & quantity: Granular urea grade B; 30,000 metric tons plus/minus 10% at the seller's option (in one or multiple lots) in bulk and 20,000 mt plus/minus 10% at the seller's option (in one or multiple lots) in big bags

Ports: Bulk product loading from Batumi port, Georgia and/or product in big bags from Trabzon port, Turkey

When: Delivery in the second half of September to the first half of October

Basis: FOB Batumi, Georgia, and FOB Trabzon, Turkey or CIF/CFR per actual freight costs

Close: Sept. 9

Data from: Company source

Notes: The company previously offered 50,000 mt of granular urea in bulk and/or in big bags via a tender that closed on July 17.

Yara starts up Europe's largest CO2 capture plant at Dutch ammonia site

- Facility liquefies 800,000 mt CO2 annually
- Ships transport emissions to Norwegian seabed
- Northern Lights expands to 5 million mt by 2028

Yara International has started carbon capture operations at its Sluiskil ammonia site in the Netherlands, it said in a statement Sept. 7, marking the start of the largest such plant in Europe.

The facility is designed to capture and liquefy up to 800,000 metric tons/year of CO_2 from ammonia production at the site, shielding those volumes from European carbon taxation under the EU Emissions Trading System.

Platts, part of S&P Global Energy, assessed nearest December EU ETS prices at €84.15/mt ($97.83/mt).

The project marks the first large-scale cross-border industrial CCS link in Europe, connecting Yara's Dutch production hub directly to Norway's Northern Lights permanent subsea storage infrastructure.

Captured CO2 will be liquefied and temporarily stored at Sluiskil before being transported by ship to Øygarden, Norway, where it will be injected 2,600 meters beneath the North Sea seabed.

The project is expected to capture and permanently store approximately 12 million mt of CO_2 over a 15-year period, Yara said.

"The carbon capture facility in Sluiskil proves that large-scale industrial decarbonization is possible today," Svein Tore Holsether, President and CEO of Yara International, said. "As global competition intensifies, Europe must find ways to cut emissions while keeping industry, jobs and critical value chains in Europe."

Yara said the site would enable the company to "further reduce the carbon footprint of its production and support low-carbon value chains across agriculture, industry, energy and shipping."

The inauguration ceremony was attended by EU Commissioner for Climate, Net-Zero and Clean Growth, Wopke Hoekstra, Norwegian Prime Minister Jonas Gahr Støre, Dutch Prime Minister Rob Jetten and Yara's Holsether, underscoring the strategic importance of the cross-border project for European leaders.

"Europe needs practical climate solutions that deliver real emissions reductions while strengthening industrial competitiveness," Hoekstra said in a statement Sept. 7. "This is exactly the kind of project Europe needs to combine climate ambition with a strong and resilient industrial base."

Northern Lights expansion

The 1.5 million mt/year Northern Lights CO2 storage facility in the Norwegian North Sea started commercial operations in 2025, with first supplies from Heidelberg Materials Brevik cement plant.

Heidelberg will supply 400,000 mt/year of CO2 to Northern Lights.

The facility is expected to start receiving further volumes from Ørsted A/S later in 2026. Ørsted has an agreement with Northern Lights to supply 430,000 mt/year from its Asnaes and Avedore biomass power stations in Denmark.

Northern Lights said it would further expand its transport capacity for the second phase of the project — including the addition of larger CO2 tankers from 2028 — which expands capacity to 5 million mt/year.

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

Stockholm Exergi AB in Sweden and Hafslund Celsio in Norway will supply additional volumes from 2028 and 2029.

Northern Lights is a joint venture between Equinor ASA, TotalEnergies SE and Shell PLC.

Argentina to boost soybean area as grain prices rally, fertilizer investment maintained

- Soybean acreage rises as corn area shrinks
- Fertilizer liquidity issues challenge buyers
- Grain prices hit multiyear record highs

Argentine analyst reported that recent positive grain prices indicate that the soybean area is expected to increase at the detriment of the corn area this year, while wheat planting was "very good"; crop input investments will at least be "maintained".

Argentina's corn harvested area is expected to be 7.7 million hectares for the 2026-27 crop season, down from 8.2 million hectares year over year, while the soybean harvested area is expected to be 17.1 million hectares for the 2026-27 crop season, up from 16.3 million hectares, according to S&P Global Energy's South America Crop Production Short-Term Outlook of Sept. 4.

However, fertilizer affordability remains a key concern among local buyers and importers, as some Argentine traders have contacted local buyers seeking liquidity for unsold volumes of ammonium phosphates, a buyer close to the matter said on Sept. 4.

"Given the multiplicity of bullish factors that emerged for the grain market in the past few weeks, speculative funds shifted pieces and took the highest net long position at least since 2014," a Sept. 4 report from the Rosario Commodities Exchange said.

In recent days, the Chicago market has witnessed "multiyear record highs" in prices for wheat, soybeans, and corn, and the big players are "betting on a scenario" in which prices remain supported at "high levels" in the face of a multitude of bullish factors, according to Rosario Commodities Exchange.

"In this scenario, the bullish bet is even more pronounced than at the most critical point of the Middle East war and than at the outbreak of the European conflict," the report said.

Argentine imports of ammonium phosphates and superphosphates increased 3.7% year over year to 906,000 metric tons from January through July of 2026, according to S&P Global Market Intelligence's Global Trade Analytics Suite data.

Imports of diammonium phosphate and monoammonium phosphate increased marginally 3.9% year over year to 669,000 mt in the period. The US shipments increased 326% year over year, while shipments from Saudi Arabia also increased 55% year over year.

Suppliers continued to field demand inquiries from destinations historically served by Chinese suppliers amid China's phosphate export ban.

Imports of nitrogen and phosphate fertilizers decreased by 5.2% to 186,000 mt, due to reduced Chinese supply and an increase in Moroccan-origin products.

In contrast, Morocco pushed exports of triple superphosphate, up 56.5% year over year to 40,000 mt, accounting for 78.8% of TSP imports as local buyers aimed for more affordable phosphate fertilizer.

OCP's efforts continue to shift toward higher-value-added solutions, particularly its TSP in established markets, also aiming to counter the surge in raw materials prices.

Platts, part of S&P Global Energy, last assessed bulk MAP South-Southeast and North-Northeast at $841/metric ton CFR Brazil on Sept. 3, down week over week.

BrasilAgro secures most fertilizer needs for the 2026-27 main crop season

- BrasilAgro secures 70%-78% fertilizer supply
- Conflicts raise fertilizer costs without revenue gains: CEO

Brazil's BrasilAgro has already secured part of its fertilizer needs for the 2026-27 main crop season, with purchases for phosphates reported at 70%, potash at 71% and nitrogen fertilizers at 78% completed, the company said on a Sept. 3 earnings report covering the quarter ended June 30, 2026.

"The conflicts in the world have only increased the cost of the fertilizer matrix; it has not yet increased the revenue matrix," André Guillaumon, CEO, said on an earnings call Sept. 4. "If the conflict ends today, there is no doubt that it will significantly affect costs, and we will not necessarily see a revenue benefit."

The company estimates variable fertilizer costs of 23% for the soybean crop, 29% for the winter corn crop, 39% for the summer corn crop, 23% for the cotton crop, and 15% for the sugar-cane as a percentage of the total 2026-27 season crop cost.

Looking ahead, due to the El Niño climate outlook, which is expected to be strong in the next cycle and whose effects vary across the regions where the company operates, the crop planting plan for the 2026-27 season was defined more selectively, considering the expected conditions for each crop and region, according to the company.

"The estimated total area is 165,208 hectares, 1% lower than the 2025-26 crop season. In the crop mix, the following stand out with a 70% reduction in the area of first-season cotton, the exit in the beans safrinha, and a 5% reduction in the soybean area," the company said. "In contrast, the area of first-season corn increases by 22%, while the cotton safrinha advances by 36%, mostly in irrigated areas."

BrasilAgro is one of the largest Brazilian companies by arable land area and focuses on acquiring, developing, and commercializing rural properties with agricultural and livestock potential.

Platts, part of S&P Global Energy, last assessed bulk MAP South-Southeast and North-Northeast at $841/metric ton CFR Brazil on Sept. 3, down week over week.

Turkish ammonia prices hit 11-month low on weak demand, Middle East war

- Weak demand drives prices down to $505/mt
- Russian sale near $500/mt signals market shift
- Iranian supply disruptions ease from April peak

Turkish ammonia prices fell to an 11-month low as weak global demand offset the effect of the war in the Middle East on supply.

Platts, part of S&P Global Energy, last assessed ammonia delivered to Turkey at $505/mt CFR Sept. 3, down $20/mt on the day and the lowest price since Oct. 1, 2025.

The drop followed the Sept. 3 sale of 15,000 mt Russian ammonia to a Turkish buyer for September delivery at close to $500/mt CIF net of credit terms.

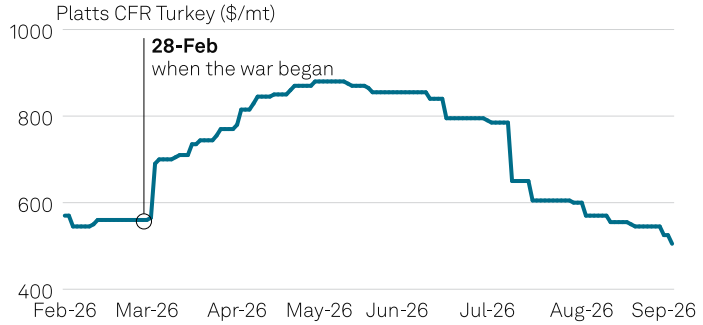

Market sources said the low price was due to limited demand in West of Suez markets, especially from Europe, leaving traders competing to fill the buyer's requirements.

The Turkish market generally trades at a discount to other CFR locations due to buyers' willingness to purchase Iranian and Russian ammonia.

The delivered price soared to $880/mt CFR in April as the outbreak of the war in the Middle East halted Iranian production and exports.

While production has resumed, deliveries from Iran remain sporadic, with the most recent cargo delivered in July, according to Platts vessel-tracking data.

Turkish ammonia price since outbreak of Middle East war

India's FACT seeks 20,000 mt technical grade urea under one-year tender

- Four 5,000 mt shipments set for Cochin port
- Bids close Sept. 17 with 15-day validity

India's Fertilizers and Chemicals Travancore Limited (FACT) issued a purchase tender on Sept. 4 for the supply of 20,000 mt of technical grade urea.

According to the tender notice, the volume is to be delivered in four consignments of 5,000 mt each on a CFR Cochin basis over a one-year contract period, with cargoes shipped in containers and discharged at Cochin port. Suppliers must dispatch cargo within 21 days of receiving a supply nomination from FACT.

The tender is scheduled to close at 14:00 IST on Sept. 17, with bids opening 14:30 IST the same day. Offers are required to remain valid for 15 days from the date of bid opening.

FACT did not immediately respond to a request for confirmation Sept. 4.

Platts, part of S&P Global Energy, assessed prilled urea at $380/mt FOB Southeast Asia and granular urea at $400/mt FOB Southeast Asia on Sept. 3.

Subscriber Notes

Platts discontinues daily FOB Black Sea Granular Urea (Russian-origin) assessment and updates weekly FOB Black Sea Granular Urea price, effective Sept. 4

Platts, part of S&P Global Energy, has discontinued its daily Granular Urea (Russian-origin) FOB Black Sea assessment and has altered the methodology behind the related weekly Granular Urea FOB Black Sea (full range) low/high assessment, effective Sept. 4, 2026.

The discontinuation reflects persistent low levels of activity in the daily spot market for granular urea of Russian origin on an FOB Black Sea basis.

The specifications of the assessment that has been discontinued are:

- **Assessment Name** : Granular Urea FOB Black Sea (Russian)
- **Symbol** : FGUBB00
- **Spot/Contract** : Spot
- **Quality** : 46% N, granular urea in bulk
- **Basis** : FOB
- **Location** : Novorossiysk port, Black Sea
- **Timing** : Loading 1-6 weeks forward
- **Quantity** : 5,000-10,000 mt
- **Unit of assessment** : $/mt
- **Frequency** : Daily at 16:30 London time

The assessment appeared under the symbol FGUBB00 in the Platts Fertecon Daily report, the weekly Nitrogen Market report, and was also available via Energy Core.

A proposal to discontinue the assessment was published here June 5. A decision note outlining the discontinuation was published here June 24.

As part of the discontinuation of the Russian-origin element of this calculation, Platts has also updated the specifications of the calculated weekly Granular Urea FOB Black Sea price assessment (FGUBB04).

The calculation is now based solely on the remaining daily Granular Urea (non Russian-origin) assessment (FGUBX00).

Platts proposes to change timestamp and publishing schedule for three Americas dry bulk fertilizer freight assessments

Platts, part of S&P Global Energy, proposes to change the timestamp and holiday publishing schedule for three Americas dry bulk fertilizer freight assessments from 1630 Sao Paulo Standard Time to 1330 Central Standard Time and change the holiday schedule from the Brazil calendar to the US calendar, effective Oct. 15.

The change will reflect coverage of three routes moving to the US from Sao Paulo.

Further information on Platts pricing holiday schedule can be found here.

Assessments affected by this proposed change are as follows:

From	To	Symbol	Cargo Size	Currency	UOM	Basis Load Port	Basis Discharge Port
US Gulf	Brazil	FUFWQ04	40,000 mt	US Dollars	mt	Tampa	Santos
Vancouver	Brazil	FUFWN04	60,000 mt	US Dollars	mt	Vancouver	Santos
Vancouver	China	FUBAP04	50,000 mt	US Dollars	mt	Vancouver	Fangcheng

Bids, offers, trades and indicative values would only be considered for the assessment if they are received before the 1330 Central Standard Time cutoff.

These assessments are published in Platts Fertecon Phosphates Market Report, Platts Fertecon Nitrogen Market Report, Platts Fertecon Sulphur Market Report, Platts Fertecon Potash Market Report, on Fertilizer Alert page FEA1000, and on Platts Shipping Alert page SHP0006 and in the Platts pricing database under the symbol codes above.

Please send all feedback, comments or questions to **shipping@spglobal.com** and **pricegroup@spglobal.com** by Sept. 16, 2024.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts updates US Domestic Urea Ammonium Nitrate price assessment, Sept. 3

Platts, part of S&P Global Energy, has amended the methodology and specifications of its weekly US Domestic urea ammonium nitrate (UAN) price assessment, effective Sept. 3, 2026.

Following market feedback and a review of trading activity, Platts has introduced a daily close value and has updated the assessment specifications to better reflect prevailing spot market liquidity and trading practices in the US Gulf Coast UAN market.

The low and high elements of the assessment are standardized at $1/short ton above and below the assessed close value. As well as introducing a close value, Platts has adjusted the basis volume, timing, and location to better reflect market activity.

The amendments are detailed below:

Specification	Previous	Effective Sept. 3
Assessment Name	Urea Ammonium Nitrate FOB NOLA, US Domestic, 32%N (FUAND04)	Urea Ammonium Nitrate FOB NOLA, US Domestic, 32%N (FUAND04)
Quality	32% N UAN Solution	32% N UAN Solution
Quantity	Minimum 1,500 st	1,500 st (barge load)
Basis and location	Loading out of New Orleans, USA on FOB barge basis; excludes netbacks from inland prices	FOB New Orleans, Louisiana
Timing	Product to be loaded within 30 days forward	Loading 1-30 days forward from date of publication
Frequency	Weekly	Weekly
Unit of assessment	$/st	$/st
Timestamp	16:30 São Paulo close, published according to the São Paulo publishing calendar	16:30 São Paulo close, published according to the São Paulo publishing calendar

The assessment continues to be published weekly on Thursday. If Thursday is a non-publishing day, the assessment is published on the previous working day.

The assessment appears in Energy Core, the Platts Fertecon Nitrogen Market Report, the US Fertilizer Report, and on fixed page FEA0363.

This launch follows a proposal published by Platts on July 13 and a decision published on Aug. 5 to update its US Domestic Urea Ammonium Nitrate price assessment.

Please send any feedback, questions and comments to **fertilizer@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches AN CFR Brazil assessment Sep 3

Platts, part of S&P Global Energy, has launched a weekly Ammonium Nitrate (AN) CFR Brazil price assessment, effective Sept. 3, 2026.

The assessment captures spot market activity in Brazil and complements Platts' existing coverage of the Brazilian nitrates market.

The assessment has the following specifications:

Assessment Name: Ammonium nitrate (AN) CFR Brazil
Quality: 34.5% N ammonium nitrate
Quantity: 6,000-15,000 mt
Basis and location: CFR, Santos
Timing: Delivered 35-50 days forward
Frequency: Weekly
Unit of assessment: $/mt

© 2026 by S&P Global Inc. All rights reserved.

©2026 S&P Global Inc. Any unauthorized use of this copyrighted material constitutes infringement of our intellectual property and will subject you to possible legal action.

The assessment considers market information reported to Platts and published as heards throughout the day, including firm bids and offers, trades, and indicative values, as well as any other data deemed relevant to the assessment process.

The assessment is published on Thursday as a single "close" value with a 16:30 São Paulo timestamp and follows the São Paulo publishing calendar. If Thursday is a non-publishing day, then the assessment will be published on the previous working day.

The assessment is published on Energy Core, Platts Fertecon Nitrogen Market Report, and the fixed page FEA0363.

This launch follows a proposal published by Platts on July 7 and a decision published on Aug. 5 to launch the weekly AN CFR Brazil price assessment.

Please send any feedback, questions, and comments to fertilizer@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Bates updated for US Domestic Urea Ammonium Nitrate symbols

The following US Domestic Urea Ammonium Nitrate symbols have had their Bates updated, as summarized below. These updates will take effect from Sept. 3, 2026.

From:

MDC	Symbol	Bates	Dec	Freq	Curr	UOM	Description
FT	FUAND04	lh	2	WA	USD	ST	Urea Ammonium Nitrate (32% N) FOB NOLA US Domestic $/st Wkly

To:

MDC	Symbol	Bates	Dec	Freq	Curr	UOM	Description
FT	FUAND04	lhc	2	WA	USD	ST	Urea Ammonium Nitrate (32% N) FOB NOLA US Domestic $/st Wkly

Please follow the link below for further details

Platts to launch daily FOB NOLA ammonia barge assessment, update weekly assessment, Sept. 24

Platts, part of S&P Global Energy, will launch a new daily assessment for ammonia barges in New Orleans and refine the specifications of its existing FOB NOLA ammonia barge weekly assessment, effective Sept. 24, 2026.

The new daily assessment will have the following specifications:

Assessment Name: Ammonia FOB NOLA Barge daily

Quality: Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius

Quantity: 5,000 short tons.

Basis and location: FOB barge New Orleans, Louisiana

Timing: Spot. Product to be shipped up to thirty days forward

Frequency: Daily

Unit of assessment: $/st

Timestamp: 16:30 Sao Paulo close, published according to the Sao Paulo publishing calendar

In addition to the launch of the new daily assessment, the existing weekly assessment will be revised to align with the daily assessment's specifications.

The FOB NOLA Brg $/st Wkly (FAMNJ04) assessment is currently assessed on a weekly basis as a low and high range, covering both spot and contract, with a minimum quantity of 1,500 short tons. Effective Sept. 24, the weekly will reflect the lowest and highest of the new FOB NOLA Barge daily assessment published over the preceding trading week (Friday to Thursday).

Platts will also launch a "close" value for the weekly assessment, reflecting market value at 16:30 São Paulo time on Thursdays, mirroring that day's daily assessment.

The changes to the FOB NOLA Brg $/st Wkly assessment are outlined below:

	Current specifications	Effective Sept. 24
Assessment Name	Ammonia FOB NOLA Brg $/st Wkly (FAMNJ04)	Ammonia FOB NOLA Brg $/st Wkly (FAMNJ04)
Quality	Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius.	Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius.
Quantity	Minimum 1,500 st	5,000 st
Basis and location	FOB barge New Orleans, Louisiana.	FOB barge New Orleans, Louisiana.
Timing	Contract and spot. Product to be shipped up to thirty days forward.	Spot. Product to be shipped up to thirty days forward
Frequency	Weekly	Weekly
Unit of assessment	$/st	$/st
Timestamp	16:30 São Paulo close, published according to the São Paulo publishing calendar.	16:30 São Paulo close, published according to the São Paulo publishing calendar.

The specification changes and assessment launch are intended to more clearly capture market dynamics.

Platts proposed the change on July 13 in a subscriber note published here .

The FOB NOLA Barge daily assessment will be available via Energy Core and the updated FOB NOLA Brg $/st Wkly assessment will continue to appear in the Platts Fertecon US Fertilizer Report and the fixed page FEA0364.

Please send any feedback, questions, and comments to Fertilizer@spglobal.com, and PriceGroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to discontinue UAN FOB NOLA Cincinnati netback assessment, effective Oct. 30

Platts, part of S&P Global Energy, will discontinue its weekly UAN (32% N) FOB NOLA US domestic (including inland Cincinnati netback) assessment (FUANE04), effective Oct. 30, 2026.

This reflects market feedback about the reduced relevance of this assessment. Platts will continue to assess UAN FCA Cincinnati, OH (FUANK04) and UAN FOB NOLA, US domestic, 32%N (FUAND04).

The last publication date for this assessment will be Oct. 29, 2026.

The assessment currently appears in the weekly US Fertilizer Report, Nitrogen Market Report, on Energy Core, and on fixed page FEA0363.

Platts proposed the discontinuation on July 16 in a subscriber note published here.

Please send any feedback, questions and comments to **fertilizer@spglobal.com** and **pricegroup@spglobal.com.**

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts to discontinue 24 European fertilizer price assessments, Sept. 24

Platts, part of S&P Global Energy, will discontinue 24 European fertilizer prices, effective Sept. 24, 2026.

The discontinuation is in response to declining product usage, shifts in trade flows, including evidence of changing end-user preference to other products, and illiquidity or limited market participants.

As the market continues to evolve, Platts will consider the most relevant and liquid markets, as evidenced by Platts trade flow software and market feedback.

Platts will continue assessing comparable markets for the affected products that better reflect market activity.

Assessments impacted by the discontinuations will be as follows:

Assessment	Platts symbol	Appears in
Ammonium Nitrate (33% N) Prill Bagged FCA France Eur/mt	FANPD04	European Fertilizer Report
