Market prices and news

Issue 26-175 | Thursday 10 September 2026

## EXECUTIVE SUMMARY

### Market braces for European curtailment impact

The production cost environment in Europe has reached levels not seen since 2022, and significant curtailments are expected to filter into the market, creating more import demand to the region.

Production costs based on today's gas price exceed $1,000/t, a spread of $325/t to today's import price. While production curtailments are not being officially confirmed, a few large importers into Europe are now back in the spot market for October. But there are no fixed-price trades being reported, and not enough liquidity to give the market a clear view on price direction.

Indications in Europe vary from below $600/t cfr up to $700/t cfr duty free/paid. The diverging sentiment and lack of trade kept prices stable, with the range unchanged at $655-690/t cfr duty free/paid. While the wide spread between import costs and production costs appears unsustainable and likely to create some price stability, there is still some downward pressure on the market, with reports today of a sale done into Morocco below last done trade.

## MARKET DRIVERS

### European production costs keep rising

Today's TTF front-month gas price rose further to $27.69/mn Btu, equating to baseline gas costs of around $970-996/t for an average European ammonia plant. This is before any fixed costs or carbon costs are included.

### US supply outlook tightens

There is uncertainty over the production status of both the Woodside and GCA plants in the next few months. Woodside has not loaded anything since the beginning of August and a restart date at the plant has not been confirmed. GCA is expected to carry out some maintenance in the fourth quarter but no timeline has been confirmed.

## 30-60 DAY OUTLOOK

The recent downward trend appears to have subsided with prices becoming more stable, particularly east of Suez. Sentiment in the west is unclear until liquidity emerges.

## WEST OF SUEZ

## NORTHWEST EUROPE

While sentiment theoretically appears more bullish, driven by the high likelihood of significant curtailments across Europe, spot trade still remains illiquid and there is still some near term downward pressure on the market until buying interest translates into trade. The lack of liquidity kept prices stable on the week at $655-690/t cfr duty free/paid.

It is likely some business has been done in the previous weeks below the published range or on a formula basis, but supply options have since become tighter in the west, and with gas prices still rising, most are in agreement that the next round of spot activity will take place at higher levels.

Indications from some sellers are that some recent sales have taken place below $600/t cfr duty free/paid as buyers looked to secure cargoes while there is still some length in the market. But details of any potential spot trade are not confirmed. Many indications are now in the $650-700/t cfr range for the next round of spot activity.

The production cost environment for European ammonia producers continues to worsen, and while most plants are still running, albeit likely at lower levels, the potential for significant curtailments is increasing.

Fresh strikes in the Middle East are driving energy prices higher. *Argus* estimates northwest European production costs at $945/t this week, up by $65/t on the week as the Dutch TTF front-month contract has continued to rise. The cost estimate is based on a weekly average of the TTF contract, and is inclusive of ETS costs and handling charges. The ETS component of this week's estimate is $26.88/t. Carbon prices are also on the rise with the ETS price settling just over $99/t today.

Detailed European ammonia line up data can be accessed *here*

| 2026 CBAM cost estimates by top supplying origins | | | $/t |
|---|---|---|---|
| Origin | Default value for 2026 (t CO2e) | CBAM default charge (ETS rolling avg) | CBAM Argus average CI charge (ETS rolling avg) |

| Russia | 2.28 | 78.89 | 76.66 |
| Other | 3.16 | 165.70 | 162.61 |

### Europe ammonia quota reaches 15pc

The EU's tariff-free ammonia quota has started to fill, with 25,300t of the 300,000t quota allocated between the end of May and 8 September. A further 19,000t are waiting for allocation, which will bring the quota to 15pc full.

## Turkey

Delivered prices are flat at $510-520/t cfr, with no new activity since a sale was confirmed at the low end of the range last week. Overall spot demand continues to be relatively slow with the market in its off-season.

## Ukraine

Domestic prices edged $5/t higher on the week in the range of $940-1,050/t fca/cpt.

Copyright © 2026 Argus Media group

Licensed to: Arief Novansa Dwi Putra, PT PETROKIMIA GRESIK

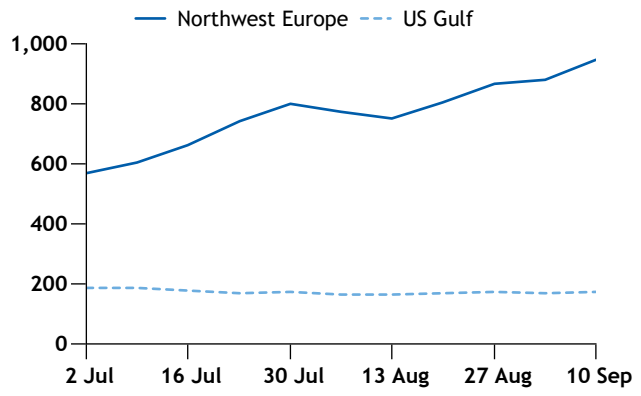

## UK

Trammo vessel *Kallo* is delivering a part cargo of Trinidad ammonia to Tees for CF UK on 9 September. The vessel previously delivered a part-cargo to Yara's Uusikaupunki port as part of spot sale.

## Italy

Yara will ship another Algerian cargo to Italy later this month as the complex continues to import ammonia rather than produce domestically. The Yara Sela is loading arond 7,000t now at Arzew and will deliver to Ravenna on 16 September.

**Production cost estimates** *$/t*

## NORTH AFRICA

Loading prices are flat at around $590-600/t fob in the absence of any new business being reported. Although producers are being increasingly emboldened by global outages and rising gas costs in Europe, and could seek higher prices for next deals.

## Algeria

Yara is loading 7,000t from Fertial at Arzew on *Yara Sela* on 10 September. The balance of the vessel will load at Sorfert for delivery to Ravenna in Italy, according to port information. Fertial has been experiencing some production disruption but has reportedly recently restarted.

Yara's *Navigator Galaxy* also loaded at Azrew on 8 September, likely for delivery to France.

## Egypt

Ebic remains offline for a six week maintenance which started in mid-August.

Trammo loaded around 10,000t from Abu Qir on the *Trammo Marycam* on 6 September under an undisclosed spot sale.

Fertiglobe's *Manta Beylerbeyi* loaded around 25,500t from Ain Sokhna on 31 August.

## Libya

Trammo's *Eco Enchanted* will load around 20,000t from NOC at Mersa Al Brega on 14 September. The destination has not yet been disclosed.

## Morocco

Delivered prices are unchanged at $555-585/t cfr.

Trammo has reported selling a US origin shipment to OCP for delivery in early October, which has been confirmed on the buy-side. The loading port, volume or vessel were not specified within the assessment window and the deal has not been reflected in any assessments until more information is forthcoming.

Trammo last sold to OCP at around or just below $570/t cfr for early September delivery, according to the counterparties. But OCP has 105,000t lined up for delivery in September, all of which will deliver from the US and Trinidad on the producer's own vessels. It is therefore not clear if the previously reported deal has yet been delivered.

Detailed Moroccan line up data can be accessed *here*

## AMERICAS

## US Gulf

Delivered prices are flat at $555-560/t cfr, with the low end continuing to reflect September's Tampa settlement. Loading prices are flat at $495-515/t fob. While the are reports of netbacks which could be below the range, there are also reports that US Gulf fob prices are firming in response to a tightening in export availability and more bullish sentiment in the wider west of Suez region. With conflicting sentiment, prices remain unchanged.

Previous length in the region is dissipating, with producer GCA comfortable after making several sales in August and for September. There are some reports that the plant could undergo maintenance soon. The supply reduction is also driven by the ongoing unplanned outage at Woodside's Beaumont plant. The plant has not loaded anything since the 2 August.

Trammo's *Gas Utopia* loaded around 25,500t from GCA on 9 September for delivery to Tampa for Mosaic on behalf of Yara.

## US Domestic

Spot US barge prices were unchanged from the previous week at $515-525/st fob Nola, with no confirmed sales during

Copyright © 2026 Argus Media group
Licensed to: Arief Novansa Dwi Putra, PT PETROKIMIA GRESIK

the week. Further inland, prices were also little changed with demand still low as the off season continues.

Rising corn prices are expected to support ammonia and nitrogen fertilizer applications during the fourth quarter, with front-month corn futures settling at $5.08/bushel on 10 September.

Many suppliers are already well sold into the fourth quarter, limiting spot availability in the near-term. But spot demand will likely begin to climb during the first half of October as harvesting wraps up and end-users assess their application needs.

The US Department of Agriculture on 9 September reported that around 5pc of the US corn crop had already been harvested as of 6 September, 2 points ahead of the 2021-2025 average. In the Corn Belt, Missouri is 8 points ahead of their respective average at 14pc complete, while Illinois— one of the top corn growing states— is 3pc complete, 2 points ahead of the five-year average.

A quicker than usual harvest can lead to an early start to the application season, but this usually depends on temperature and soil moisture.

### Trinidad

Loading prices are flat at $505-510/t cfr.

A producer was heard to be offering a spot cargo which is now thought to have been sold. Enbw's *Ontario* is due to load around 25,500t at Point Lisas on 15 September after diverting from Beaumont, US.

## EAST OF SUEZ

## MIDDLE EAST

Loading prices are stable at $420-450/t fob following the stabilisation of most markets east of Suez, particularly India.

The remains no sign of an easing to tensions in the Middle East, with the US and Iran continuing to exchange strikes. Two tankers were struck yesterday in the Mideast Gulf in separate attacks.

### Saudi Arabia

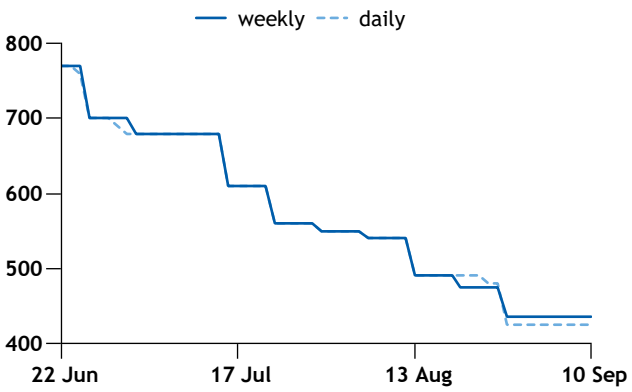

Sabic's board has signed off on a final investment decision (FID) for its new 2.6mn t/yr urea facility, with commercial production set for the fourth quarter of 2030.
The facility will also include a 1.2mn t/yr ammonia capacity and post-combustion carbon capture unit. Construction is planned to start in the fourth quarter this year, according to a stock exchange filing.

Detailed Indian ammonia line up data can be accessed *here*

### Iran

Lordegan and Hengam are both down due to technical issues. Hengam temporarily started operations at its urea plant last week before stopping both ammonia and urea production on Friday. Gas availability is healthy but exporting during the ongoing US blockade remains difficult.

**Middle East fob daily vs weekly price** *$/t*

## INDIA

Delivered prices remained steady at $460-490/t cfr, with no new confirmed trades. While one trader is indicating $500/t cfr India for the next spot availability, there has been no confirmed buying interest at this level. Most suppliers continue to indicate prices at $460/t cfr upwards, despite bids at $400-420/t cfr. Contract shipments continue to deliver at prices at the high end of the range. Discussions are shifting towards formulas rather than further aggressive spot price reductions. Last confirmed spot prices from Oman remain close to the $470/t cfr level to the west coast. Most market participants consider prices in the low-$400s/t cfr too low for current market conditions.

Fertilizer plants are operating and continue to require some ammonia particularly for phosphoric acid production routes, but sulphur remains rationed. The recently introduced sulphur subsidy has had limited impact on ammonia demand so far, as the subsidy accounts for only a small share of overall production costs.

Recent deals from southeast Asia to longer-haul destinations could mean Indian buyers will be faced with increased competition for supply. The rapid price declines seen in recent weeks are likely to slow or cease as a result.

## ASIA PACIFIC

Delivered prices remained unchanged at $460-520/t cfr, with buying interest in east Asia remaining subdued as importers continued to rely on term contract deliveries.

Copyright © 2026 Argus Media group

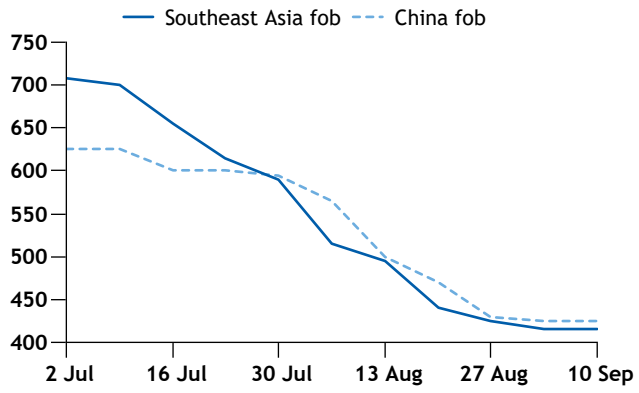

Licensed to: Arief Novansa Dwi Putra, PT PETROKIMIA GRESIK

The regional fertilizer season is nearing an end, while demand in Vietnam is also muted, as buyers continue to grapple with elevated sulphur prices and are delaying ammonia purchases.

Southeast Asia loading prices were steady at $400-460/t fob with the supply side becoming more balanced after months of pressure. Weak demand from east Asia continued to limit spot activity, although prices could strengthen following the recent sale of spot ammonia to Mexico cleared some stocks from the region. Prompt spot availability is limited. Regional supply is also expected to tighten, with Pupuk Indonesia taking one of its ammonia plants offline for maintenance until October. Some higher indications were heard in the $450-500/t fob range, backing up the firmer sentiment in the region.

Arbitrage shipments remain a possibility although still unlikely while freight costs remain so high and price direction remains unclear in the west. Interest from European buyers is circulating, with at least one buyer testing the market for volumes from southeast Asia.

**Southeast Asia vs China fob** *$/t*

## China mainland

Export offers are largely indicated in line with last week at $400-450/t fob, although market activity was muted. Most suppliers have withdrawn from the export market and are unwilling to sell at below $450/t fob.

Rising coal prices have increased domestic ammonia production costs, reducing the attractiveness of export sales. Producers are prioritising the domestic market over spot opportunities.

Mitsui's *Nova Breeze* loaded around 25,500t of ammonia from Zhanjiang port on 29 August, and will then deliver to Topolobampo port in Mexico later this month.

## China domestic

Domestic ammonia prices fell in the river regions, owing to the suspension of shipments to ports. But prices continued to firm in the west, and in Fujian owing to the shutdown of ammonia plants Xinlianxi Jiujiang, Hualu, Wanhua, Yanhua and Shenma.

- In the river, Jiangsu, ammonia prices fell to Yn2,520/t ($376/t) ex-works.
- In Anhui, prices fell to Yn2,450-2,500/t ($365-373/t) ex-works.
- In Hubei, prices fell to Yn2,250-2,370/t ex-works.
- In Sichuan and Chongqing, prices were stable at Yn2,500-2,800/t ex-works.
- In Guizhou, prices rose to Yn2,700-2,800/t delivery.
- In Fujian, prices rose to Yn3,000/t ex-works.

## Indonesia

Pupuk Indonesia has taken one of its ammonia plant offline for a scheduled maintenance, with operations set to resume by early November. This is likely to firm up regional supply. Offers for spot cargoes are still in the $405-410/t fob depending on cargo size.

Mitsubishi has charted the *Seamaid* and loaded around 25,000t of ammonia from Luwuk, which will to deliver to India. Mitsui's *Berlian Ekautor* also loaded 23,800t from Bontang on 2 September which will deliver to Lazaro Cardenas port by 29 September.

## Malaysia

Petronas remains largely committed to term contract deliveries through October, leaving limited spot availability. Petronas' *Navigator Glory* loaded 15,000t of ammonia from Kerteh and will then deliver to Taiwan.

## Taiwan

Buyers remain largely covered by regular contract deliveries, limiting spot market activity. Interest in spot cargoes is subdued, with buyers resisting offers above $500/t cfr. The *Yukon* is scheduled to deliver 25,000t of US-origin ammonia to Taiwan later this month.

## Are you ready for CBAM?

*Argus* can help with our new Fertilizer Carbon Border Adjustment Mechanism (CBAM) Cost Calculator. This is intended to provide the market with a tool to estimate the unit CBAM cost for importing fertilizers — ammonia, nitric acid and downstream products that use ammonia and nitric acid as raw materials — to the EU. To access the Cost Calculator, please click here.

# Argus Fertilizer Caspian, Black Sea and Eastern European Markets Conference

**17–18 September 2026**

InterContinental Istanbul, Türkiye

**Register now**
*via the link*

**450+** attendees
**200+** companies
**45+** countires

## Among key topics:

- Trends in the Global Fertilizer Market: Demand and Price Dynamics
- The Influence of Geopolitical and Macroeconomic Factors on Fertilizer Trade Patterns
- Future Outlook and Advancements in Fertilizer Markets within the Black Sea Area
- Summary of Emerging Infrastructure Initiatives and Port Development
- Production Capabilities and Export Opportunities of Suppliers from Central Asia
- The Fertilizer Freight Market
- Developments in Logistics Infrastructure in Ports of the Caspian and Black Sea Regions
